THOR CLOUD

THOR on your endpoints. Results in the cloud.

Full THOR assessments on thousands of endpoints, without a management server or an agent rollout. Share the launcher; THOR scans locally with the full detection content and reports to the cloud.

Launch locally. Review in the cloud.

1

Set the scope

Create a campaign. Choose the profile and scan options. Distribute the launcher with your existing tools.

2

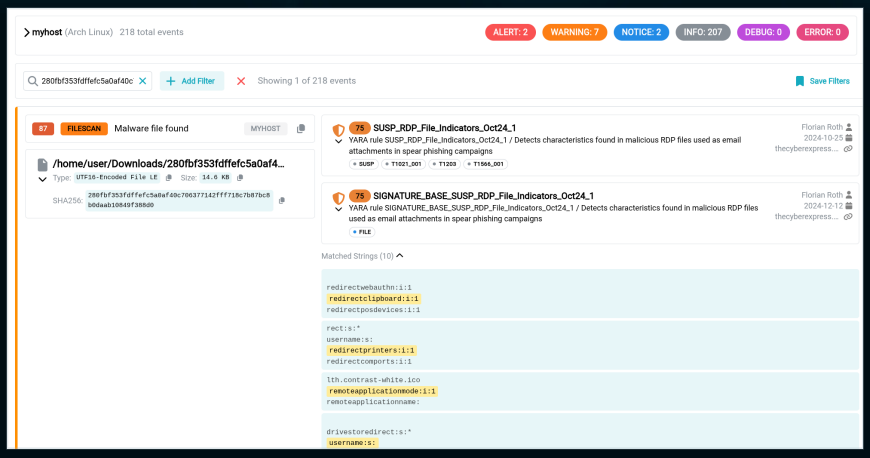
Run locally

THOR scans locally with the full detection content, then removes itself. Nothing is left behind.

3

Review centrally

Results go to the cloud for review in your browser, or straight to your SIEM.



Included detection content.
YARA, Sigma, IOCs and forensic checks.

Evidence for your SOC. On demand.

Validate alerts

Confirm or clear an EDR or SIEM alert with evidence from the system itself.

Investigate compromise

Find what the alert didn't tell you: hacker tools, web shells, backdoors and attacker traces.

Repeat assessments

Keep checking: scheduled rescans of the same estate through campaign settings.

SUPPORTED PLATFORMS

Windows · Linux · macOS

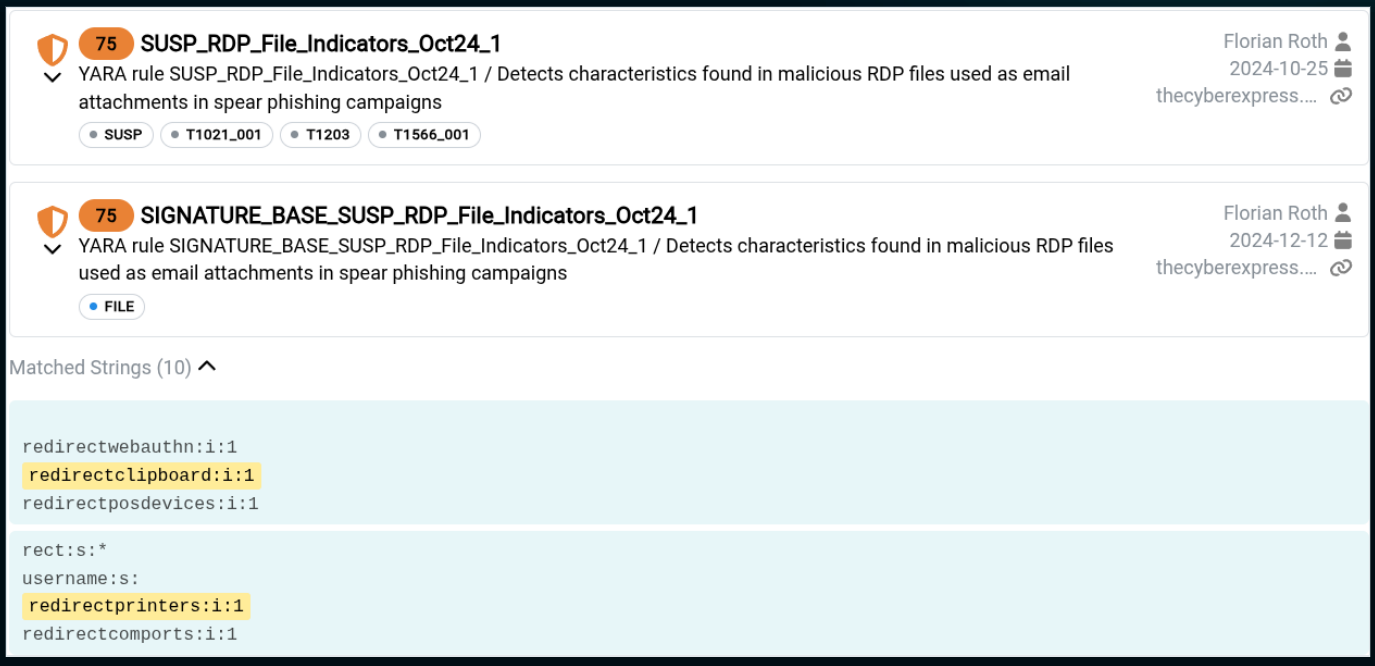
nextron systems

We detect hackers.
500+ customers · 30+ countries · scanning tools recommended by security agencies

THOR CLOUD

Understand every finding.

See detection reasons, matched content and context in one view.



Filter by fields or selected text. Save reusable filters and suppress recurring false positives in future scans.

Control access. Protect results.

Company sign-in

Connect your identity provider through OIDC SSO and map groups to roles.

Scoped access

Assign permissions by campaign to separate teams, customers or investigations.

Protected reports

Encrypt scan reports with your public key for end-to-end protection.

</> Forward results. Automate everything.

Forwarding profiles
Scan results go from the endpoint straight to your SIEM or log collector: Syslog, JSON or CEF over TCP or UDP, TLS optional. One default profile per campaign.

Full API
Every function is available through the API. Personal or account keys with permissions, expiry and IP restrictions.

Run your next assessment.
