WELCOME TO THE LATEST MAKEFAST TACTICAL PRODUCTS CATALOGUE

We're proud to present our comprehensive range of buckles, adjusters, hooks, and ancillary equipment in this catalogue. At Makefast, we specialise in designing and manufacturing high-quality products, primarily in stainless steel and plastics, with the flexibility to work with other materials upon request. Many of our innovations have been developed in close collaboration with our valued customers.

Our extensive range of buckles provides reliable solutions for a wide variety of applications. If you have specific requirements, our dedicated Sales and Design Teams are here to assist with special designs and enquiries.

We take pride in quality and safety. Many of our products meet the stringent Lifejacket Standard EN ISO 12402-7:2006/FprA1:2010 and are clearly marked to reflect this certification. Additionally, we maintain ISO 9001:2015 certification (Certificate FM 60306) to ensure the highest quality standards across all our operations.

At Makefast, we are committed to continuous improvement and welcome feedback to enhance our products and services.

Certificate number FM 60306

ABOUT US

Makefast's Complex Buckles offers a selection of secure and high-performance fastening solutions designed for durability and ease of use. This range includes the High Strength Plastic Buckle, Slimclick Buckle, Click Lock Buckle, Click Lock Buckle with Adjuster, Fast Donning Safety Buckle and Quick Release Buckle. Each buckle is engineered with precision, combining premium materials with innovative locking mechanisms to ensure strength, reliability and user convenience.

CUSTOMISED COATINGS FOR DIVERSE APPLICATIONS

The majority of our products can be customised with black or coloured finishes to meet your specific requirements. This feature is particularly beneficial for military and security equipment, where functionality and discretion are paramount.

ELECTROPHORETIC COATING (E-COAT)

E-coat is widely recognised for its excellent corrosion protection and its ability to uniformly coat complex shapes, such as bends, cavities, and hard-to-reach areas. This process offers versatile applications: As a standalone coating, it provides reliable corrosion resistance for components where a decorative finish is not required.

In combination with powder coating, it delivers enhanced protection and a robust, aesthetically appealing finish for components that require a higher level of durability.

XYLAN BLACK COATING

Xylan Black Coating is an advanced organic, solvent-based, resin-bonded dry film lubricant. It is designed to reduce friction, prevent scoring and galling, and provide secondary lubrication. This coating is ideal for optimising low-friction-to-wear ratios, enhancing the durability and performance of components.

CERAKOTE COATING

Cerakote is a leading-edge, thin-film ceramic coating known for its unparalleled abrasion, corrosion, and chemical resistance. It is the ultimate solution for protecting components in demanding environments.

For more information on coating options and minimum order quantities, please contact us.
