

MILITARY & LAW ENFORCEMENT

UNIFORMS FOR EXTREME WEATHER – AND HARSH CONDITIONS

DESIGNED IN SWEDEN
MADE IN EUROPE. 

TAIGA[®]

TAIGA LEADS THE WAY

Since 1982, Taiga has been developing workwear for the advanced user. Professionals who, in their daily work, are faced with challenging tasks in both demanding environments and weather conditions.

As it was in the beginning, our aim is still to contribute to a safe and secure working environment for all our users. Our philosophy is to create functional, durable, and sustainable products of the best quality. That's why we never compromise when it comes to materials, accessories, or details in our designs.

Just over twenty years ago, when we began to develop products for the Military and Law Enforcement, they were manufactured according to our same philosophy and always in close collaboration with relevant experts in each field.

Our interest in understanding humans, and how we are affected by climate and other external factors has been a strong driving force in developing the products that we offer today to proud Taiga users around the world.

CLOTHING SYSTEMS

DRESS FOR AN OPTIMAL PERFORMANCE - REGARDLESS OF CLIMATE

Understanding how the human body works in different temperatures and working conditions is critical to ensure a good working environment for an extended period. To maintain a good performance and ability to concentrate, you need to control temperature and moisture in your Clothing System.

Therefore, our Clothing System philosophy is based on a several layer principles for easy adjustment of your heat and moisture balance. Functional garments shall keep you Dry, Warm and Secure without restricting your movement and performance.

Each layer in the Clothing System has its specific function, and the garments complement each other in an efficient way.

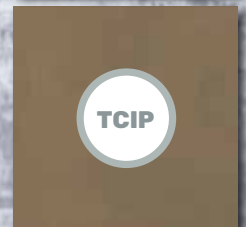

CAMOUFLAGE

UNIQUE PATTERNS TO MAXIMIZE YOUR PROTECTION

In our ambition to create the best possible conditions for our end users we have developed our own unique camouflage patterns. We offer a choice of four standard camouflages but can also print custom or national camouflage designs on demand.

With our unique camouflage technologies, you will not only get a good visual camouflage, but also maximum protection against detection by equipment in the UV, VIS, IR, and TIR spectrum.

TMTP	Taiga Multi Terrain Pattern
TSUP	Taiga Snow UV Pattern
TCIP	Taiga Concealed IR Printing
TIR	Thermal IR
CUSTOM	National Camouflage

WINTER

COLD WEATHER OPERATIONS

Characteristic for operations in an Arctic or Subarctic environment is that weather conditions can quickly change between extremes. Rapid changes between damp and cold to dry and extremely cold makes high demands on a uniform system. The Taiga arctic cold weather system is built upon a multiple layering system.

Some of our most well-known military uniforms are developed in the area around the Arctic Circle where you often face challenges such as darkness, long distances, and extreme cold. One such example is The CPA Arctic system, a popular choice for Cold Weather Operations.

The CPA Arctic Jacket and Trousers

are together an all-weather uniform that differs from most other Gore-Tex garments, because of the liner system. This liner system provides a better camouflage characteristic, better moist transportation in temperatures below the freezing point, and are fully functional, with the right reinforcement garments, all the way down to extreme cold.

The jacket has ventilation in the right places when using load bearing equipment. It has a large hood with a removable fur, and in total 14 pockets to keep all important pieces of kit secure and at the right places.

The trousers have a higher back, that keeps the wind out, suspenders, large thigh pockets, vent-zips on the hips, wide legs and zippers for easy access to boots.

FIELD UNIFORMS

FOR MISSIONS ALL AROUND THE WORLD

In close collaboration with our users, we have developed several different systems of field uniforms for different types of operations.

Being faced with demanding operations means you expect only the best from your gear, allowing you to focus on your mission, regardless of location or season. Taiga's field uniforms are optimised for functionality in a wide spectrum of operations and climates and have a multifunctional design for versatile use over extended periods of time.

Our durable and functional field jackets with pants, underwear and reinforcement garments are adapted for different environments, challenges, and weather conditions. They help you stay dry, warm, and secure. Protecting from rain, wind, cold, heat, and other hazards.

3 important things

MINIMUM WEIGHT

Minimizing the material's weight and bulk increases the wearer's endurance when performing tasks. We developed our materials to make the equipment as multifunctional as possible for maximum versatility.

CAMOUFLAGE

To reduce risk of detection and optimize the wearer's performance, the uniform systems are printed with camouflage patterns and offer protection in UV, IRR and TIR wavelength ranges.

PRACTICAL STORAGE

Specially designed pockets that allow fast, easy access to materiel such as medical trauma kits, maps, compass, GPS, survival pouch and accessories such as shooting gloves.

COMBAT

UNIFORMS FOR RAPID RESPONSE OPERATIONS

Our assault uniform systems for rapid response are developed with unique fabrics and functions to meet the operator's expectations of their equipment and to ensure that they work in any situation that may arise. Our Combat SF line is made in a unique full stretch material with "no melt, no drip" properties. It gives you good protection, as well as ability and comfort when the intensity is high. We want you to be able to fully focus on your mission.

Combat SF UAC Shirt

Designed to work with body armor, chest rig or other types of load bearing vests. It has the unique combination of stretch and IR camouflage in the fabric.

The full stretch material makes the shirt follow every move of the operator and therefore, not hamper their agility. It has a "no melt, no drip" protection, smart arm pockets, and elbows with space for extra protection.

Combat SF Trousers

The unique combination of stretch and IR camouflage in the fabric makes the trousers follow every move of the operator, and therefore, not hamper their agility or flexible in a demanding combat environment.

The trousers has "no melt- no drip" values, high riding thigh pockets, ventilation openings and pre-bent knees with D30 protection – which is a must on hard surfaces.
