

We care. For Durchblick.

Network Scanning with JDisc Discovery

JDisc Discovery

We care. For Klarheit.

Finally know what is in your IT environment

Most discovery tools can tell you which devices are connected to your network. JDisc Discovery goes much further by providing the detailed, accurate, and continuously updated asset information that organizations need to manage modern IT environments effectively.

Instead of generating simple device lists, JDisc Discovery creates a comprehensive view of your infrastructure, helping IT teams improve security, reduce operational effort, and make better decisions.

"You cannot secure, manage, or optimize what you cannot see"

Deep visibility instead of basic scanning

Many discovery solutions focus on finding IP addresses and identifying active devices. While useful, this information alone does not provide the insight required for IT Asset Management, CMDB maintenance, or cybersecurity initiatives.

JDisc Discovery collects detailed information about hardware, software, operating systems, users, network devices, virtual environments, and cloud resources. The result is a complete and actionable inventory rather than a simple network scan.

Built for real IT environments

Modern IT infrastructures are complex. They span multiple locations, datacenters, cloud services, virtual environments, and systems from many different vendors.

JDisc Discovery was designed specifically for these challenges. By combining multiple discovery technologies, it delivers accurate inventory data across physical, virtual, and cloud-connected assets - regardless of platform or vendor.

Whether you manage a single site or a globally distributed infrastructure, JDisc Discovery provides the visibility needed to understand and manage your entire IT environment.

- Large and distributed environments
- Heterogeneous infrastructures
- Multiple operating systems and vendors
- Segmented networks and datacenters
- Physical, virtual, and cloud assets

Agentless and easy to deploy

Unlike solutions that require software agents on every endpoint, JDisc Discovery uses established protocols and existing infrastructure services to gather information. This significantly reduces deployment effort and ongoing maintenance.

Organizations can often begin discovering assets and generating valuable insights within hours rather than weeks.

"The best inventory solution is the one that starts delivering value immediately."

Why JDisc Discovery stands out

Discover relationships not just assets

An inventory becomes truly valuable when you understand how assets are connected.

JDisc Discovery identifies relationships between servers, virtual machines, clusters, storage systems, network devices, and other infrastructure components. This provides the context needed for CMDBs, migration projects, impact analysis, and IT operations.

**"Assets tell you what you have.
Relationships tell you how your
infrastructure works."**

Broad device coverage

Modern IT environments contain much more than servers and PCs.

JDisc Discovery discovers and inventories a wide range of devices, including network infrastructure, storage systems, printers, industrial equipment, or laboratory devices.

Clean and consistent data

Raw discovery data often contains duplicate, inconsistent, or vendor-specific information.

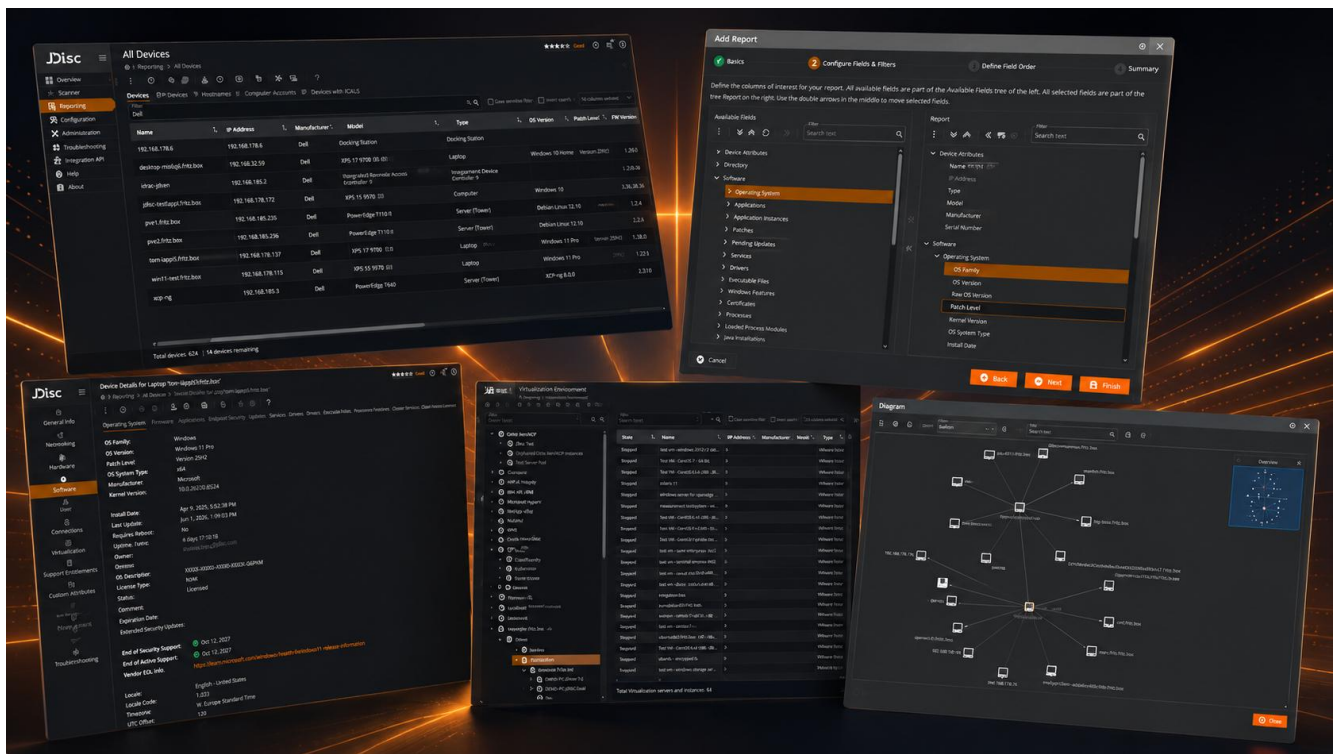

JDisc Discovery normalizes hardware and software information to create clean, consistent, and actionable asset data. This improves reporting, simplifies software asset management, and increases the value of CMDB and ITAM initiatives.

**"JDisc Discovery is turning data into
business value."**

Built for enterprise scale

Real-world IT environments are large, distributed, and constantly changing.

JDisc Discovery is designed to handle complex infrastructures with thousands of devices, multiple locations, segmented networks, and large datacenter environments. Distributed scanning and efficient data collection ensure reliable performance as your environment grows.

JDisc Discovery in action

Navigate naturally. Drill down instantly

IT environments generate an enormous amount of information.

JDisc Discovery helps you move from high-level overviews to detailed asset information quickly and intuitively.

"No complicated navigation paths. No switching between multiple tools."

Just the information you need, when you need it.

Understand relationships through visual diagrams

Explore network connections, device relationships and infrastructure dependencies from a graphical perspective. Instead of searching through tables and reports, you can immediately see how systems interact and how components fit together.

Dark mode. Light mode. Your choice.

Both light and dark themes are fully supported, allowing every administrator to work comfortably in the environment that suits them best.

"Because productivity often comes down to the small details."

Help when you need it

Throughout JDisc Discovery, context-sensitive help is always available to explain functionality, settings and available options.

Whether you are configuring a discovery job, creating a report or exploring a new feature, assistance is never far away.

About JDisc

We care. For Qualität. For Service.

Supporting customers for many years. Understanding needs and providing support as quickly and as excellently as possible is what we do. With an outstanding product and outstanding service.

Our IP scanner is intelligent, flexible, and constantly learning. We will not linger but keep on developing our company and our tool. In this way, you can benefit from innovative updates weekly. At no additional cost.

The JDisc story

**More than 25 years of
experience in network inventory**

We have been working in network discovery since 1999. As employees of an international IT hardware and software company, we shaped the development of network discovery tools for many years.

Over time, we realized that our vision for an excellent IP scanner was drifting further and further apart from our employer's vision: We simply wanted something different!

Network discovery on a new level

Our goal was to push the boundaries of network discovery, the boundaries of functionality, and the boundaries of service at the same time. Since 2009, we have been supplying JDisc Discovery – an IP scanner that hands over full control of internal IT systems to customers worldwide. No agents, no hassle, and no hidden costs.

International, personal, independent

Our in-house development team is international, independent, and personally available.

We manage all functions, developments, and integrations ourselves. This ensures maximum security for your data and consistently smooth operations.
