SustainaPPack

Elevating Sustainability with PolyPropylene Packaging

The prevailing approach to designing environmentally friendly packaging that reduces the damage caused by single-use plastic waste includes incorporating diverse strategies. These strategies involve recyclable solutions and reduction in the use of limited fossil resources materials by minimizing weight and incorporating recycled sources through a mass balance approach.

MPP Group's innovative product line aligns with this strategy by providing a range of solutions, each making its unique contribution to preserving the environment.

Foamed SustainaPPack

Versatile Foamed mono PP portfolio solutions, featuring cups and trays. These innovative products are recyclable eco-friendly alternatives to paper or foamed PS cups and trays.

Advantages:

- Fully recyclable in common PP recycling streams
- 10%-30% of weight reduction
- Minimized use of limited fossil-based raw materials
- Enhanced heat insulation
- Reduced carbon footprint by 10-30%

High-Barrier SustainaPPack

High barrier PP product line, 350-1000 microns, composed of less than 5% EVOH layer. Perfectly designed for retort processes.

Advantages:

- Fully recyclable in common PP recycling streams
- High barrier - extending shelf life and minimizing food spoilage
- Suitable for freezing
- Microwave heating applications
- Available as rolls or trays

ISCC certified SustainaPPack (Mass Balance Approach)

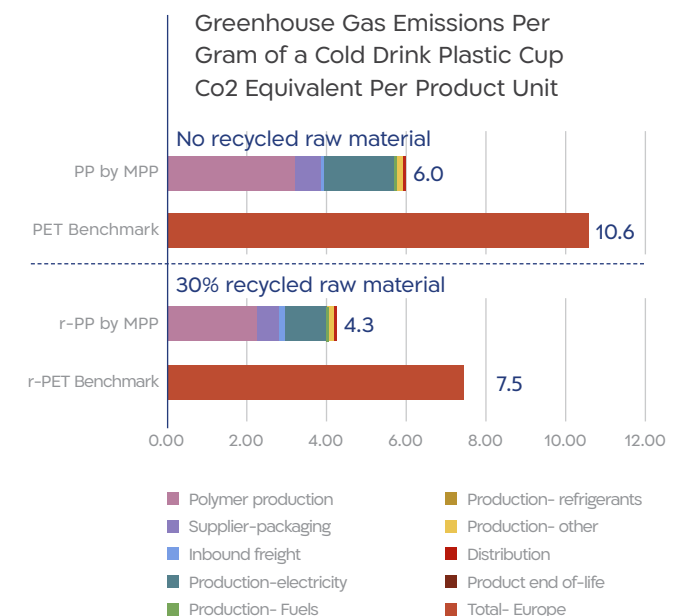

Innovative mono PP product line, manufactured from decontaminated used cooking oil, which serves as the foundation for high-quality polypropylene. Approved for food contact and can be incorporated in different percentages at the final packaging, to meet your sustainability goals.

Advantages:

- Fully recyclable in common PP recycling streams
- Reduced carbon footprint by ~30%, compared to virgin PP
- Reduced carbon footprint by ~45%, compared to recycled PET (rPET)
- ISCC plus certified (mass balance approach)
- Complies with relevant regulations as fossil-based polymers

About MPP Group

MPP Group places a strong emphasis on providing eco-conscious packaging solutions within its product portfolio. In addition to the PP line, the company offers packaging solutions based on recycled PET, non-pigmented, for easy sorting and recycling. PS cups for dairy products are also available, incorporating a high percentage of PIR material for sustainable packaging solutions.

MPP Group Around the World

MPP group consistent growth is achieved both organically and through mergers and acquisitions. Today the global group distributes from four sites locations in Israel, worldwide.
