

Full of frogs, all for the frogs.

Catalogue of Frogs

Full of Frogs Amphibians Farm

About F.O.F Farm

Full of Frogs Amphibians Farm founded in 2018 by veterinarian Damon Chen in Pingtung County, Taiwan.

Following by Dr. Chen's vision—to replace wild-caught frogs in the global pet trade with responsibly captive-bred animals—F.O.F focuses on the captive breeding and commercial production of ornamental amphibians, with a strong emphasis on frogs.

About F.O.F Farm

The farm has invested heavily in developing multi-species breeding protocols, enabling the stable reproduction of seasonally breeding species and significantly improving tadpoles and froglets survival rates. To ensure consistent year-round supply for international markets, F.O.F has also built controlled rearing facilities with stable temperature and humidity, allowing us to maintain reliable stock levels and deliver healthy, high-quality animals to customers worldwide.

About F.O.F Farm

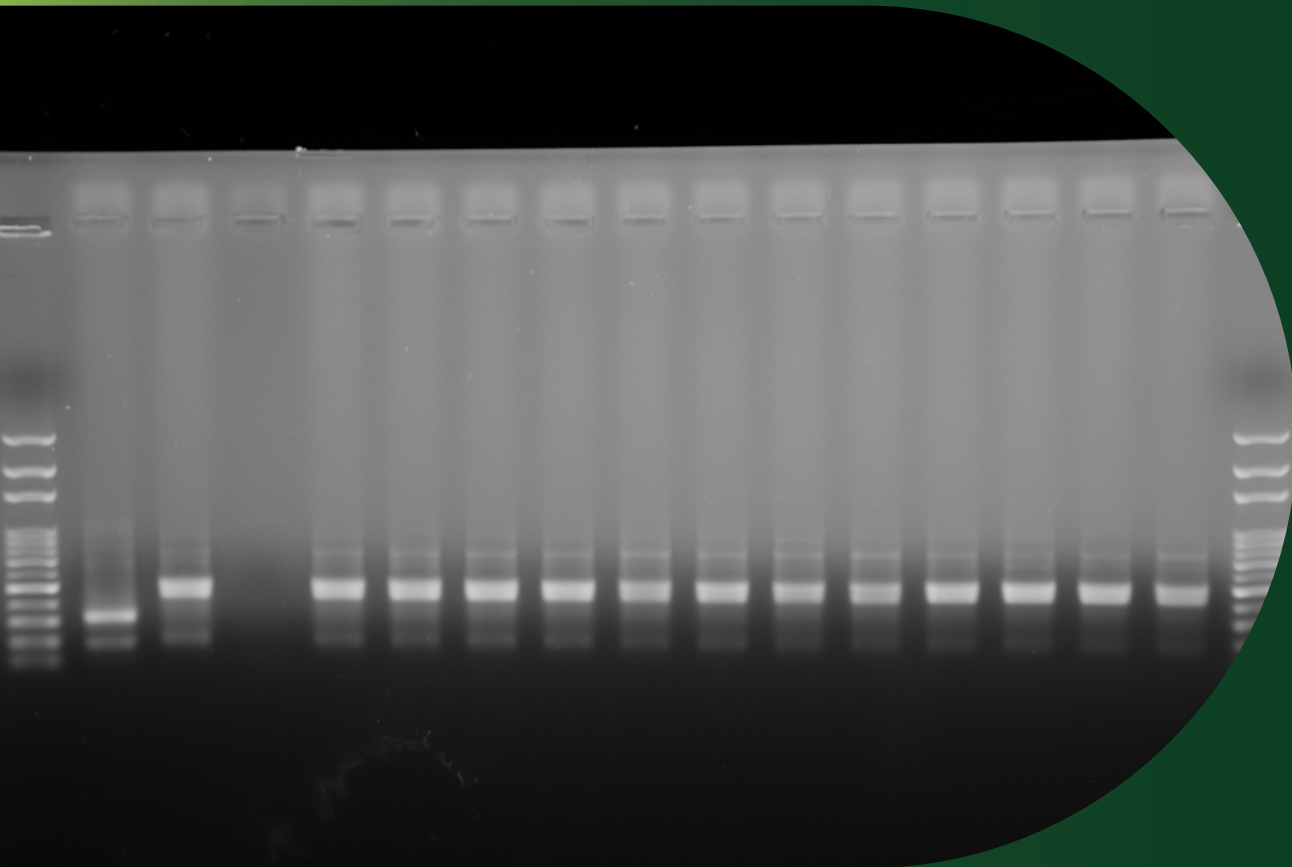

The Full of Frogs's team is highly diverse and professionally trained, with expertise spanning **animal disease treatment,**

biosecurity, disease diagnostic & testing, frogs husbandry, captive breeding and international trade.

About F.O.F Farm

Full of Frogs is **one of the very few amphibian breeding facilities in the world to operate its own disease diagnostic laboratory.**

Under our biosecurity program, **every incoming species is screened by PCR testing for all WOAH-listed notifiable amphibian diseases, including Batrachochytrium dendrobatidis (Bd, chytrid fungus), Batrachochytrium salamandrivorans (Bsal, salamander chytrid), and Ranavirus.** Only animals that test **negative** are allowed to enter our breeding facility.

About F.O.F Farm

In addition to our internal testing, **F.O.F participates in five rounds of government-led disease surveillance every year** under Taiwan's official animal health authority.

F.O.F has maintained over five consecutive years of zero positive detections and is **the only amphibian breeding facility in Asia officially certified as disease-free** by a government veterinary authority.

About

F.O.F Farm

Conservation and Education Actions - Overview

1

Promoting environmental and ecological education

2

Reducing pressure from illegal wild-caught

3

Building a conservation platform linking industry and society

About

NJWG Pet Trading Co.

In export and distribution, Full of Frogs operates primarily as an international exporter. Our core markets include North America (the United States and Canada), Europe, Japan and Korea, South-east Asia, the Middle East, and Africa, reaching more than 30 countries worldwide.

Today, F.O.F is recognized as **the world's most stable, highest-quality, and largest-market-share supplier of ornamental frogs**, setting the model for reliability and captive-bred excellence in the global live pet market.

Frog Directory

Ceratophrys cranwelli

Green Horned Frog

Size 4 cm

P/S had several meals (frozen fish + complex vitamin + calcium)

Introduce Green horned frog is a common morph in this species.
The base color is green, with dark brown spots.

Ceratophrys cranwelli

Red Coffee Horned Frog

Size 4 cm

P/S had several meals (frozen fish + complex vitamin + calcium)

Introduce The Red Coffee Horned Frog is a newly introduced color morph, officially launched by Full of Frogs Amphibians Farm in late 2024. This morph is the result of refining the traditional dark-toned Coffee Horned Frog into a bright red expression, creating a more vivid and eye-catching appearance.

Due to its strong visual resemblance to the popular Red Ornated Horned Frog, the Red Coffee Horned Frog quickly became highly sought after shortly after its release, making it a standout choice in the premium horned frog market.

Ceratophrys cranwelli

Camouflage Horned Frog

Size 4 cm

P/S had several meals (frozen fish + complex vitamin + calcium)

Introduce Camouflage horned frog is a common morph in this species. The base color combine green, coffee, red and copper. This kind of appearance is more close to wild color.

Ceratophrys cranwelli

Albino Horned Frog

Size 4 cm

P/S had several meals (frozen fish + complex vitamin + calcium)

Introduce Albino horned frog is popular in this species.
The base color is bright yellow, with orange or yellow spots and the ruby red eyes are due to their albino genes.

Ceratophrys cranwelli

Strawberry Horned Frog

· Orange Red line

Size 4 cm

P/S had several meals (frozen fish + complex vitamin + calcium)

Introduce The Strawberry Horned Frog is one of the most popular color morphs in the horned frog's morphs. Its vibrant red coloration makes it a top choice for festive seasons such as Christmas and Lunar New Year, where bright and auspicious colors are especially favored.

Strawberry Horned Frog have two distinct bloodlines. One is the Blood Red Strawberry, characterized by deep, blood-red dorsal striping with striking contrast. The other is the Orange Strawberry, featuring a uniform orange-red body coloration that offers a softer yet equally eye-catching appearance.

· Blood Red line

Ceratophrys cranwelli

Apricot Horned Frog

Size 4 cm

P/S had several meals (frozen fish + complex vitamin + calcium)

Introduce Apricot horned frog has yellow & orange line on their back, it is the special feature of this morph.

Ceratophrys cranwelli

Pikachu Horned Frog

Size 4 cm

P/S had several meals (frozen fish + complex vitamin + calcium)

Introduce Pikachu horned frog is our signature product in 2020. It is generally known as "4- spots patternless" albino horned frog. However, our Pikachu is different with other blood-line. After purification for 5 years, our Pikachu presents uniform butter yellow color with 4 red bean-like spots on their back. The spots will more obvious when their body and limb are gradually covered with white snowflake pattern after adult.

Ceratophrys cranwelli

Super Pikachu Horned Frog

Size 4 cm

P/S had several meals (frozen fish + complex vitamin + calcium)

Introduce The highest degree of patternless albino horned frog.
This morph only has beautiful yellow butter color without any red spots.

Ceratophrys cranwelli

Matcha Horned Frog

· Normal Matcha

· 2-spots Matcha

Size 4 cm

P/S had several meals (frozen fish + complex vitamin + calcium)

Introduce Matcha horned frog which also is our signature product in 2020. It is generally known as "4- spots patternless" green horned frog. In our experience, we found that normal frog always harder than albino frog to get patternless. We spent more time to stable this patternless gene than Pikachu horned frog.

Ceratophrys cranwelli

Samurai Blue Horned Frog

Size 4 cm

P/S had several meals (frozen fish + complex vitamin + calcium)

Introduce

In the past, blue coloration in horned frogs was often believed to be the result of feeding diets containing artificial colorants. However, the Samurai Blue Horned Frog developed by Full of Frogs Amphibians Farm represents a true genetic breakthrough.

After nearly eight years of selective breeding and genetic purification, the blue coloration of our Samurai Blue Horned Frog is now entirely derived from natural cellular expression, not from dietary pigmentation. This ensures stable, consistent coloration and long-term genetic reliability. Need to notice, it takes about 4 weeks for it to turn into blue color.

Building on this foundation, we are proud to announce that a new color variant, "Sky Blue", is scheduled for release in 2027, further expanding the premium blue series of horned frogs.

Ceratophrys cranwelli

Lime-white Horned Frog

Size 4 cm

P/S had several meals (frozen fish + complex vitamin + calcium)

Introduce Through repeated purification, we have refined Lime-green into a cleaner, whiter line. "Lime-white" shows faster white development and greater stability than earlier Lime-green lines, with the white expression continuing to intensify as individuals mature and increase in size.

Ceratophrys cranwelli

Coral Blaze Horned Frog

Size 4cm

P/S had several meals (frozen fish + complex vitamin + calcium)

Introduce The Coral Blaze Horned Frog is the result of multiple generations of selective cross-breeding, combining premium bloodlines such as Strawberry and Super Pikachu. After years of refinement, Full of Frogs Amphibians Farm officially introduced this exceptional morph in mid-2025. Featuring multi-layered coloration with striking interwoven red and yellow patterns, Coral Blaze delivers a bold and dynamic visual impact. Since its debut, this morph has created a major sensation in both European and North American markets, quickly becoming one of the most talked-about new horned frog releases.

Ceratophrys cranwelli

Fantasy horned frog

Size 3cm

P/S had several meals (frozen fish + complex vitamin + calcium)

Introduce Fantasy horned frog is a hybrid offering cross between *C.cornuta* and *C.cranwelli*. This special hybrid species has beautiful horn-like projections above its eyes, just like Surinam horned frog. Also has great body condition as *C.cranwelli*.

Ceratophrys cranwelli

Mutant Horned Frog

Size 4 cm

P/S had several meals (frozen fish + complex vitamin + calcium)

Introduce Mutant Horned Frogs exhibit a wide range of color variations caused by genetic mutations in skin and eye pigment cells. These unique expressions result from different stages and patterns of cellular changes, making each individual highly distinctive.

The best Mutant color : Snow White
This morph combine Translucent, Elipse eyes gene together.

Snow White

Metal Blue

Metal Blue+Translucent

Metal Blue + Translucent + Eclipse eyes

Dark

Translucent

Mutant-Metal Blue

This morph displays a striking, metallic blue sheen across the body. It represents the initial stage of programmed cell apoptosis in xanthophores (yellow pigment cells). During this stage, yellow pigment cells lose functionality, allowing blue structural coloration to become visible.

As this is part of an ongoing cellular process, the blue coloration is typically temporary and often transitions into other color forms within approximately two months.

Mutant-Translucent

When pigment cells undergo apoptosis, affected skin areas develop a reduced-pigment, jelly-like translucent appearance. If this process occurs across the entire body, the frog may eventually express a uniform dark or pale (white) coloration.

Mutant-Dark

A fully dark-colored expression resulting from a complete-body translucent mutation, producing an entirely black appearance.

Mutant-Snow White

A rare, full-body translucent mutation resulting in a pure white appearance, highly valued for its rarity and visual impact.

Mutant-Eclipse Eyes

This mutation affects the eyes, causing the entire eyeball to appear black. Eclipse eyes frequently occur in combination with translucent mutations, making such individuals especially unique and collectible.

Ceratophrys cornuta

Red Suriname Horned Frog

Size 2.5 cm

P/S had several meals (frozen fish + complex vitamin + calcium)

Introduce C.cornuta, also know as Suriname horned frog and Amazonian horned frog.

They has an exceptionally wide mouth, and has horn-like projections above its eyes. Besides, this species is easy to feel stressed, so sometimes they're hard to keep.

Ceratophrys cornuta

Green Suriname Horned Frog

Size 2.5 cm

P/S had several meals (frozen fish + complex vitamin + calcium)

Introduce C.cornuta, also know as Suriname horned frog and Amazonian horned frog.

They has an exceptionally wide mouth, and has horn-like projections above its eyes. Besides, this species is easy to feel stressed, so sometimes they're hard to keep.

Ceratophrys stolzmanni

Pacific Horned Frog

· Green Pacific Horned Frog

· Red Pacific Horned Frog

Size 4 cm

P/S had several meals (cricket+ complex vitamin + calcium)

Introduce *C. stolzmanni*, is also known as Pacific horned frog. They are smallest *Ceratophrys* frog in the world. Our Pacific Pacman Frogs not only are in good color, but also patternless.

Chacophrys pierotti

Chaco Horned Frog

Size 2.0 cm

P/S had several meals (cricket + complex vitamin + calcium)

Introduce Although chaco horned doesn't belong to the Ceratophrys family, everyone still like to call them horned frog.

This adorable species have big eyes and small body. However, they are quite energetic when hunting small insects.

Rhaebo guttatus

Smooth-sided toad

Size 3 cm

P/S had several meals (cricket + complex vitamin + calcium)

Introduce

Native to South America, the Smooth-sided Toad gained world-wide popularity after appearing as Neville Longbottom's pet toad in the Harry Potter film series. Since then, it has become one of the most recognizable toad species among amphibian enthusiasts.

Known for its strong feeding response and enthusiastic appetite, this species is especially appreciated by keepers for its engaging and easy-to-observe behavior.

In 2025, Full of Frogs Amphibians Farm successfully established captive husbandry and breeding techniques for the Smooth-sided Toad and began small-scale captive production. Following further stabilization, the species is scheduled to be introduced to the international market in 2027, with the clear objective of reducing wild-caught specimens originating from Suriname, South America, and promoting a sustainable, captive-bred supply chain.

Dyscophus guineti

False Tomato Frog

Size 3 cm

P/S had several meals (cricket + complex vitamin + calcium)

Introduce

The False Tomato Frog is one of the three recognized tomato frog species native to Madagascar. This species is listed under CITES Appendix II, and Full of Frogs Amphibians Farm holds valid export permits, allowing for legal international trade worldwide.

False Tomato Frogs exhibit clear sexual dimorphism: males typically display a bright orange coloration, while females are known for their vivid red appearance, making them especially attractive in the pet trade.

When threatened, this species secretes a milky white, mildly irritating defensive substance from the skin, serving as an effective deterrent against predators.

Full of Frogs Amphibians Farm has successfully achieved stable, large-scale captive breeding, and is currently supplying captive-bred individuals to international markets, supporting sustainable trade and reducing pressure on wild populations.

Pyxicephalus adspersus

Giant Pixie Frog

Size 3 cm

P/S had several meals (cricket + complex vitamin + calcium)

Introduce African bullfrog, also known as **Giant Pixie Frogs**. This species is one of the biggest frogs in the world. Male frog can reach 24.5cm (9.6 in) in snout-to-vent length, female smaller than male, only around 10-12cm.

Lepidobatrachus laevis

Budgett's Frog

Size 5 cm

P/S had several meals (frozen fish + complex vitamin + calcium)

Introduce Budgett's frog are totally aquatic frog, they can spend their whole life in the water environment. This cute species have a very huge mouth and can eat everything Just as long as suits them. Sometimes, they will make a funny noise when they feel angry.

Litoria caerulea

Blue White's Tree Frog

Size 3 cm

P/S had several meals (cricket+ complex vitamin + calcium)

Introduce *Litoria caerulea*, also known as Australian green tree frog. They are most famous pet tree frog in worldwild due to their smiling face and very easy to keep.

Trachycephalus resinifictrix

Amazon Milk Frog

Size 3 cm

P/S had several meals (cricket+ complex vitamin + calcium)

Introduce

The Amazon Milk Frog is native to the Amazon Basin of South America and is widely regarded as one of the top three most popular pet tree frogs in the world, alongside the Red-eyed Tree Frog and the White's Tree Frog. Juvenile Milk Frogs display a striking pattern of milky white and black coloration, resembling the markings of a dairy cow, which is the origin of their common name.

Milk Frogs are also known as the Mission Golden-eyed Tree Frog due to their distinctive golden eyes. When threatened, they secrete a thick, milky white substance with a noticeable odor to deter predators. One of the most unique biological characteristics of the Milk Frog is that its blood appears blue in color.

Full of Frogs Amphibians Farm has successfully established a stable captive breeding program for Milk Frogs. In 2026, we will further expand into large-scale production, supplying up to 5,000 individuals per month to the international amphibian and reptile market.
