### 颗粒介质旋转阀

- 对于颗粒物料，如何在保证介质流通截面积的情况下实现颗粒有效防剪切，一直是一个相互矛盾的问题。单纯的在进料口增加一个导流板势必降低转子填充效率。科狮工程师经过实验分析找到了一个解决方案：优化新W型防卡槽的位置和形状，使防卡槽内颗粒处于可流动状态，分析计算进料口通道截面积，使其有效面积与阀门公称截面积相当。

- 此外，优化后的设计有效的降低了转子在剪切颗粒物料时产生的间歇式冲击，进而延长了驱动链条和电机减速机的使用寿命。整个阀门的维护周期也将大大降低。

- 颗粒介质旋转阀可以带料启动，料仓出料口到旋转阀进料口之间可以节省一台气动刀闸阀。

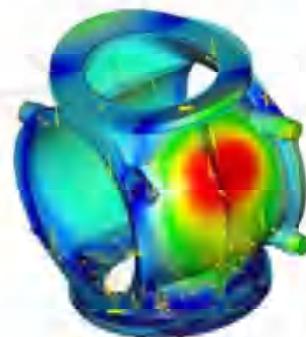

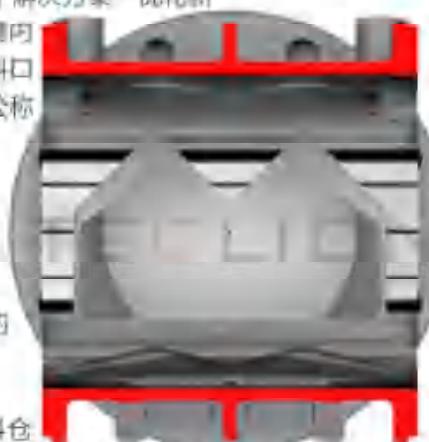

- 有效的进、出料口防剪切设计，大大降低出料口物料堆积引起的堵转概率，并且大大降低了粒子破碎率。

### ROTARY VALVES FOR GRANULAR PRODUCTS

- Inlet baffle plates installed in housings prevent plastic pellets from being crushed but, in turn, reduce the remaining inlet cross section, the filling capacity of the rotor chambers and the speed range which results in low throughputs. Our engineers have analyzed the problem and found a solution: the edges inside the housing are specially designed to operate like baffles and the down-rotating part of the housing is foreseen with by-pass chambers to avoid product damage. Thanks to this largest possible inlet cross section, a higher throughput can be achieved.

- Furthermore, the smooth and shock-free operation reduces the wear of the chain drive and the gear motor. Exchanging these parts then becomes obsolete, normal product life and regular maintenance provided.

- As the rotary feeder can be reliably started with vertical product columns, slide gate valves for the start-up are no longer required.

- Very low breakage rate.

## MAIN FEATURES 主要特征

TECLION Diverter Valves come with more than 20 years of independent development, precision manufacturing and practical experience. 科狮机械TECLION 有着20年的换向阀设计、制造及解决用户现场设备问题的经验。

### DIVERTER VALVES FOR GRAVITY FLOW

- Traditional diverter valves require material flow to be shut off before redirecting the material often requiring an additional knife gate above the valve.

We solved the problem, so if you select DDV or DW series, you can divert the valve on a stream of material (when required).

### 可带料切换换向阀

- 传统的换向阀不可以带料切换，切换前需要保证管道中物料已经被吹扫干净。针对这个问题，TECLION推出了DW和DDV两种可带料切换的换向阀，其中DDV系列用于重力落料，DW系列可用于气力输送。
- 科狮独有的DDV双刀系列，属于双刀系列换向升级产品，内部无死角、不串料，可以替换一台刀闸阀和一台摆动板换向阀。
