

QRILLTMPET

A Healthy dog = Happy happy dog

Omega-3 fatty acids and choline are proven to have numerous health benefits.

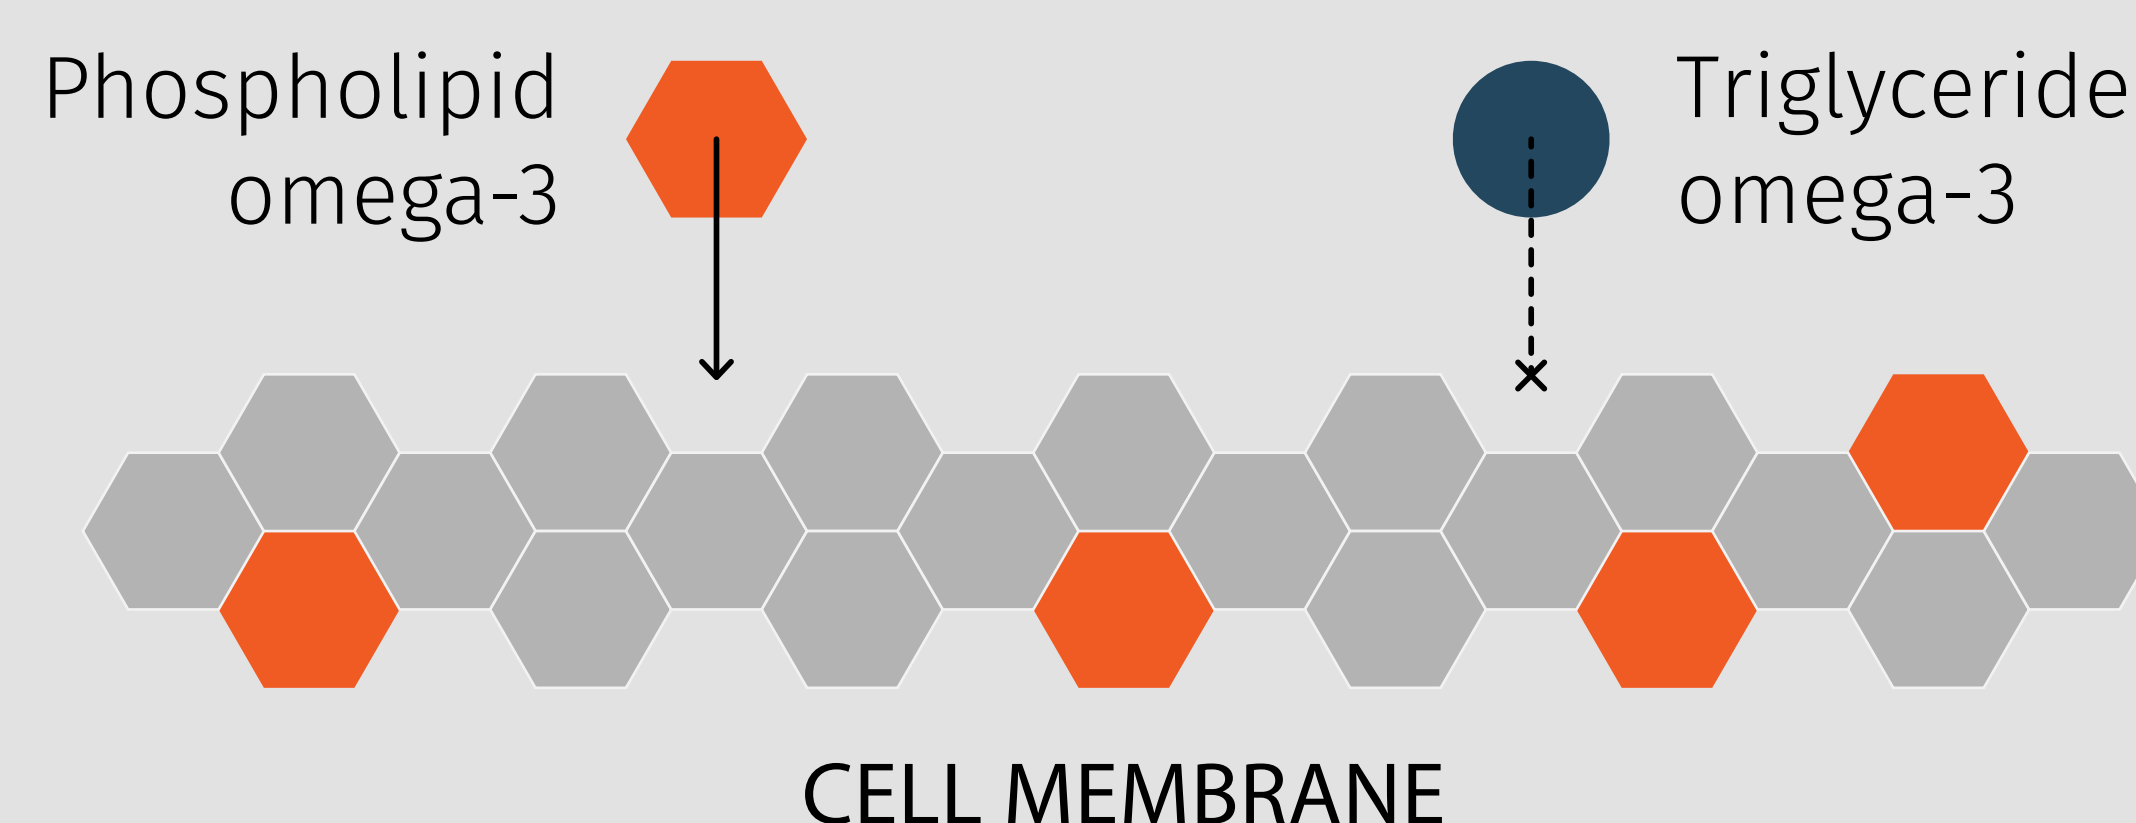

Krill are small, shrimp-like crustaceans, rich in phospholipids, choline, marine proteins and astaxanthin. Antarctic krill can grow to six centimeters in length and weigh two grams. They live in large and dense swarms throughout Antarctic waters.

A unique ingredient

Superior & powerful omega-3s for a premium formulation.

The omega-3s in QRILL Pet are mostly bound to phospholipids, which differentiates them from some traditional omega-3 sources.

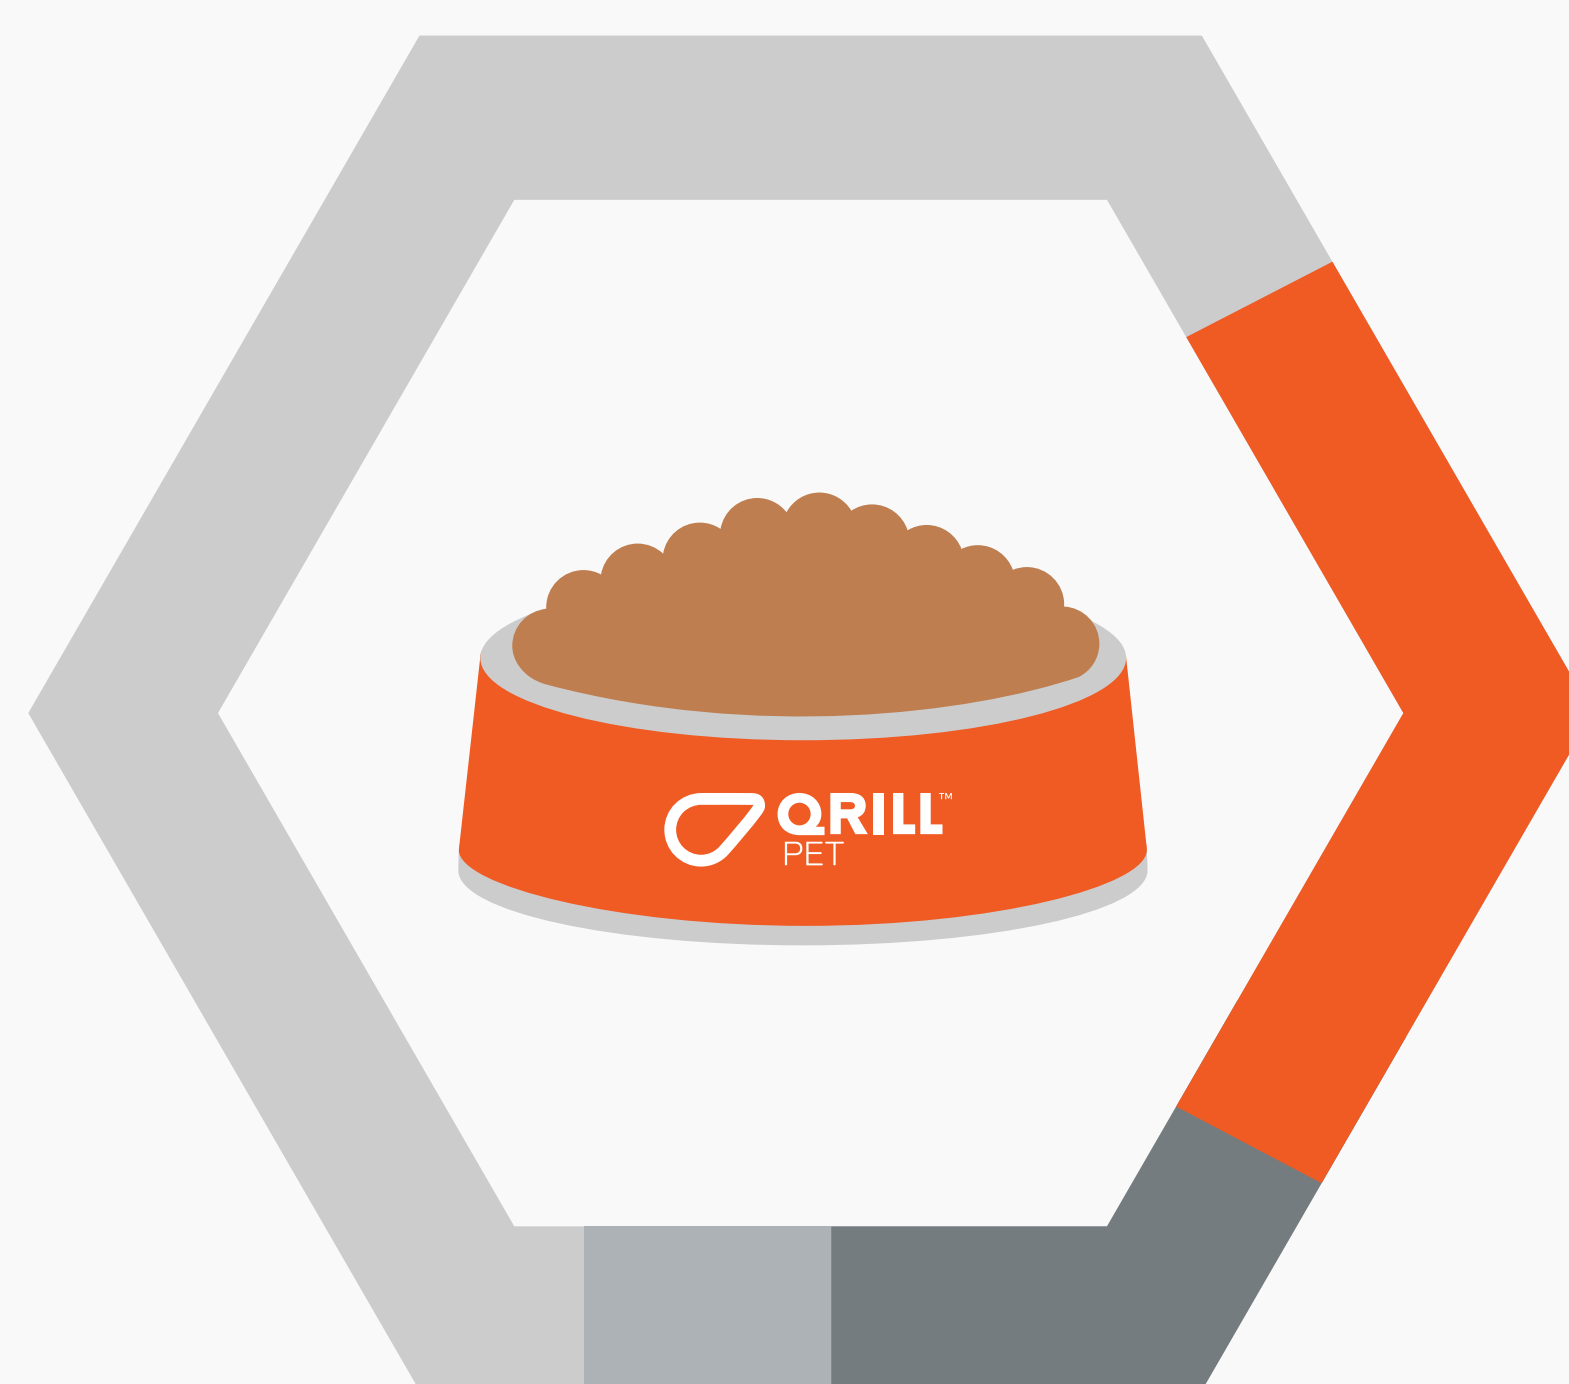

Known as the foundation of all cells, phospholipids are more effectively incorporated into tissues and cells.

Nature's simple solution

A powerful and natural ingredient for premium brands.

QRILL Pet offers much more than just omega-3s:

- Marine Proteins
- Powerful Astaxanthin
- Choline

HIGH IN PROTEIN

Highly palatable protein and fat from one of the most pristine waters on earth.

28% Total Fat **59% Protein**
7% Ash **6% Water**

Extremely Sustainable & Traceable

QRILL Pet comes from one of the most sustainable fishery in the world.

100%
TRACEABILITY:
63901S 58931W

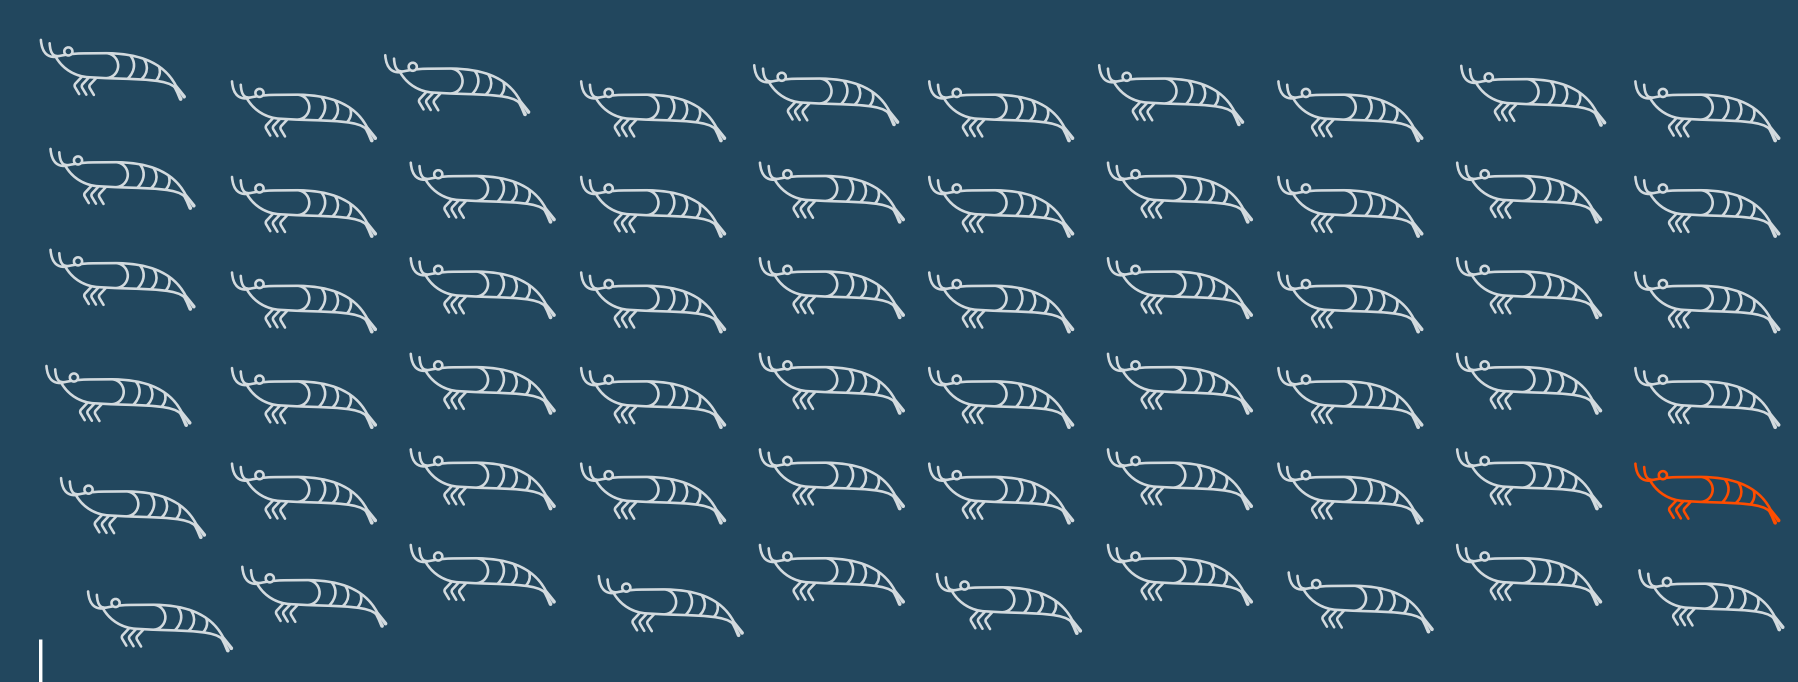

Area 48 is the only location in the Southern Ocean where Aker BioMarine and others have a license to fish krill.

QRILL Pet is certified by the Marine Stewardship Council (MSC) for being sustainable & traceable.
