About RMC

Engineering and Manufacturing for Industrial Refrigeration

RMC is an engineering and manufacturing company that designs and manufactures industrial refrigeration equipment and heat pump systems.

We combine in-house engineering expertise, manufacturing capabilities, and the ability to adapt equipment to the specific technical requirements of customers and partners.

RMC works with both standardized products and custom industrial solutions, including OEM manufacturing. This approach enables us to support different cooperation models - from the supply of individual equipment to long-term manufacturing partnerships.

Products & Manufacturing Capabilities

RMC's key areas of expertise include:

- | | |
|--|---|
| • CO ₂ / R744 refrigeration equipment | • R290 solutions |
| • Industrial heat pumps | • Compressor packs |
| • Condensing units | • Compressor-receiver units |
| • Chillers | • ALPS packaged units |
| • Control panels | • Standardized and custom manufacturing |
| • OEM manufacturing | |

A key advantage of RMC is the ability to combine in-house engineering and manufacturing, adapting equipment design and configuration to specific technical requirements.

CO₂ / R744 & Natural Refrigerants

Natural Refrigerant Solutions

RMC designs and manufactures industrial refrigeration equipment using natural refrigerants, including CO₂/R744 and R290.

The product range includes compressor packs, refrigeration units, and custom-engineered solutions for industrial and commercial applications.

Our in-house engineering expertise enables us to adapt equipment to specific system parameters, while our manufacturing capabilities allow us to deliver both standardized and custom solutions.

Key application areas:

- | | |
|------------------------|---|
| • Food Retail | • Food Processing |
| • Cold Storage | • Logistics Facilities |
| • Distribution Centers | • Industrial Refrigeration Applications |

Industrial Heat Pumps

Industrial Heat Pumps

Industrial heat pumps are one of RMC’s strategic product areas.

Solutions are engineered according to the specific parameters of each facility, required heating capacity, operating conditions, and energy-efficiency requirements.

Key application areas include:

- | | |
|--|----------------------------|
| • Food Processing | • Industrial Manufacturing |
| • Logistics Facilities | • Commercial Facilities |
| • Other Energy-intensive Industrial Applications | |

RMC works both directly with industrial customers and in cooperation with engineering and OEM partners.

Standardized & Custom Manufacturing

RMC combines two manufacturing models.

- | |
|--|
| <p>Standardized manufacturing</p> <p>is used for products and configurations that can be scaled through dealer, distributor, or OEM cooperation models.</p> |
| <p>Custom manufacturing</p> <p>is used for projects where equipment must meet specific technical parameters, operating conditions, or partner requirements.</p> |

This enables RMC to work simultaneously with repeatable product solutions and complex engineering challenges.

OEM & Manufacturing Partnership

Manufacturing Partnership

OEM manufacturing is one of RMC’s strategic areas for international development.

RMC is open to cooperation with:

- | | |
|-------------------------|--------------------------|
| • Engineering companies | • Installation companies |
| • Dealers | • Distributors |
| • Manufacturers | • Technology partners |

Cooperation may include adapting equipment to a partner’s technical requirements, manufacturing standardized products or specific configurations, as well as developing long-term manufacturing partnerships.

Customers & Partners

RMC works with:

- | | |
|---|------------------------|
| • Engineering and installation companies | • OEM partners |
| • Dealers and distributors | • Food Retail |
| • Food Processing companies | • Distribution Centers |
| • Cold Storage facilities | • Logistics complexes |
| • Industrial and energy-intensive companies | |

Why RMC

Engineering

Engineering expertise in complex refrigeration equipment, CO₂/R744, R290, compressor systems, and industrial heat pumps.

Manufacturing

In-house manufacturing capabilities that combine standardized products with custom adaptation.

Partnership

A focus on long-term cooperation with international partners, OEM models, product adaptation, and repeat projects.
