# How heylogin works

**heylogin**

## 1 Onboarding via email, Azure AD and Google Workspace

Invite your employees via email or synchronize heylogin directly with Azure AD and Google Workspace. Manual onboarding via startcode is also possible.

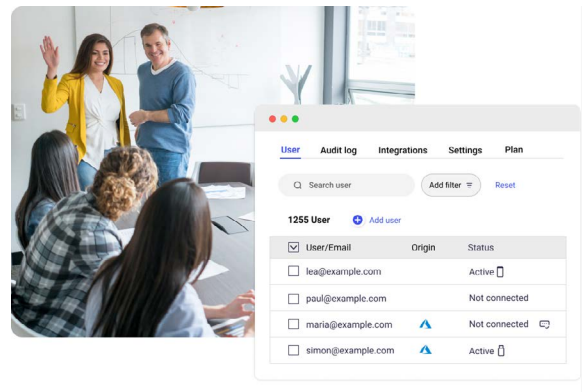

## 2 Logging in to all websites with the browser extension

Our browser extension recognizes login forms and displays heylogin instead. This works automatically with all websites without any further steps. We offer an extension for Chrome, Safari, Firefox and Edge.

Without heylogin          VS.          With heylogin
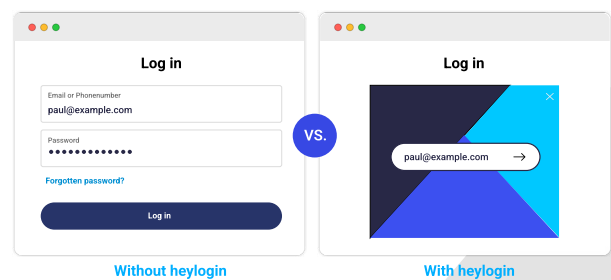

## 3 Confirm with App, Security Key, Touch ID or Windows Hello

With a Swipe to Login, employees confirm their login process via iOS or Android app. For employees without smartphones, we support FIDO2 Security Keys, which are used like USB sticks. Other alternatives include Touch ID, Windows Hello and smartwatches. By using security chips built into these devices, heylogin is always 2-factor secure without a complicated master password.

# The complete solution
## for your company

✓ **Generated passwords always at hand for every registration.**

heylogin generates secure passwords for all websites at any time.

✓ **No more annoying 2FA entries.**

heylogin automates the entry of 6-digit codes (TOTP) so that you no longer have to the hassle of typing.

✓ **Simplify onboarding and offboarding with our user management.**

Our user management enables you to get employees ready for work in just a few minutes and minimize idle times.

✓ **More transparency through optimized access management.**

Our team and access management gives you complete transparency about all authorizations in your company.

✓ **All user activities at a glance with our audit log.**

The integration of an audit log enables permanent control and overview of user actions in your company.

✓ **Protect employee accounts by synchronizing compromised data.**

Our data breach monitoring checks employee accounts continuously for compromised data.
