

ROBATECH AT FACHPACK: HIGH-PRECISION GLUING

From September 24 to 26, 2024, Robatech is presenting its adhesive application system for maximum precision and reliability at FACHPACK in Nuremberg. But also the new, small melter for simple applications with low adhesive consumption promises good application quality. Additionally, Robatech is demonstrating live on the booth how easy precise folding is.

The **Vision adhesive melter** in combination with the **Performa heated hose** and the **Volta electric application head** is Robatech's flagship product and stands for maximum process reliability and precision when gluing primary and secondary packaging. The energy-efficient melter reliably keeps the adhesive viscosity constant and ensures a stable adhesive pressure. The fully insulated Performa heated hose conveys the adhesive to the application head with as little heat loss as possible. And finally, the Volta electric jetting head applies the adhesive with pinpoint precision – thanks to the high switching frequencies, it is also suitable for hot melt stitching.

For simple applications with an adhesive requirement of up to 2.5 kg/h, the small **Easy adhesive melter**, which forms the EasyLine together with the Rio heated hose and the Twist application head, is sufficient. The functionalities of this new melter are limited to the necessary minimum, but no expense has been spared on clever details for easy installation and quick maintenance. Despite its simplicity and attractive price/performance ratio, the Easy melter delivers adhesive application quality in the usual Robatech quality.

Folding should be as precise as gluing. The patented **PerfectFold liquid creaser**, which visitors can experience live at FACHPACK, is as brilliant as it is simple. An application head applies a creasing liquid to the fold lines of a corrugated cardboard box – similar to an adhesive application – so that the blanks can be folded precisely and with little effort. Cracking of the cardboard, irregular gaps and fishtailing are now history. Corrugated cartons creased with PerfectFold provide exact internal dimensions so that inserts can be fitted into folding boxes without any problems.

ROBATECH

Robatech optimizes the industrial hot melt and cold glue application with sustainable and innovative adhesive application systems. Since 1975, Robatech has been developing and producing high-quality control systems, application heads, melters, and dosing systems that make gluing processes more environmentally friendly, safe, and straightforward. The Robatech Group, headquartered in Muri/AG, Switzerland, is represented in more than 80 countries. More than 670 employees worldwide provide personal and fast customer support in a wide range of industries.
