

# LT Auditor<sup>MP</sup>

Multi-platform cybersecurity and compliance monitoring for Windows, Linux, and hybrid cloud environments.

Cyber threats are increasing and IT environments are growing more complex. LT Auditor<sup>MP</sup> helps security, IT, and compliance teams monitor critical activity, detect suspicious behavior, strengthen accountability, and support investigations — from a single, unified platform.

## WHY IT MATTERS

### Turn fragmented activity into actionable visibility.

Important changes occur every day across identities, files, endpoints, systems, and cloud platforms. When that activity is dispersed across multiple tools, teams, and log sources, organizations face slower detection, weaker audit readiness, and more manual effort to reconstruct what happened. LT Auditor<sup>MP</sup> delivers the clarity required to act with confidence.

#### BUSINESS OUTCOMES

- Reduce blind spots across on-premises, cloud, and hybrid environments
- Monitor what matters — the users, files, systems, and events that create the greatest business risk
- Detect sooner — spot suspicious activity earlier and accelerate response
- Improve accountability for identity, access, and sensitive-data activity
- Simplify reporting for audits, regulatory obligations, and executive oversight
- Strengthen forensic readiness with records and context for investigations

## 02 / COVERAGE

### Visibility and protection across every layer

#### Identity and user risk

Identities are the front door to the organization. LT Auditor<sup>MP</sup> monitors the access changes that can create exposure.

- Monitor Active Directory user and group changes
- Identify user and group vulnerabilities
- Track successful and unsuccessful Windows logons
- Investigate account, access, and permission changes
- Improve awareness of activity that may increase exposure

#### File and data protection

Business-critical and regulated data often resides across file systems and shared folders. LT Auditor<sup>MP</sup> shows who changed what, who accessed what, and where sensitive information may be stored.

- Monitor file and folder activity changes
- Identify permission vulnerabilities
- Improve visibility into access to valuable business data
- Scan for PII-sensitive data
- Surface data-risk conditions before they become security or compliance events

#### Cloud and hybrid visibility

Visibility should not end at the traditional network perimeter. Whether infrastructure is on-premises, cloud-based, or hybrid, LT Auditor<sup>MP</sup> helps deliver broader oversight without unnecessary operational complexity.

|--------------|-------|------------------|----------------|---------------------|
| Windows      | Linux | Azure Sign-In    | Azure Entra ID | OpenText eDirectory |
| OpenText NSS | AWS   | Google Workspace | macOS          |                     |

## Detection, forensics, and compliance

### Detection and forensic readiness

LT AuditorMP® ingests and analyzes activity from perimeter devices attached to the network, generates alerts for suspicious behavior, and creates forensic records to support investigations. When an incident occurs, teams need more than raw logs — they need context: what changed, who was involved, how serious the event may be, and where to investigate next.

|               |              |                   |              |
|---------------|--------------|-------------------|--------------|
| 01<br>MONITOR | 02<br>DETECT | 03<br>INVESTIGATE | 04<br>REPORT |
|---------------|--------------|-------------------|--------------|

### CAPABILITIES

- Generate alerts for suspicious activity
- Analyze relevant activity from connected perimeter devices
- Create forensic records to support incident investigation
- Accelerate answers for security, IT, audit, and leadership teams
- Improve readiness for internal misuse, external compromise, and operational events

### COMPLIANCE AND AUDIT READINESS

Cybersecurity is not only about protection — it is also about demonstrating that appropriate controls are in place. LT AuditorMP® provides standardized, customizable reporting aligned to major compliance and security frameworks, helping organizations reduce manual reporting effort and prepare more effectively for audits and regulatory reviews.

|       |       |           |      |
|-------|-------|-----------|------|
| NIST  | HIPAA | NIS2      | GDPR |
| FFIEC | FDIC  | ISO 27001 | DORA |

And other applicable control and regulatory requirements.

“Make reporting more defensible. Give auditors, executives, and stakeholders clearer evidence of security activity, accountability, monitoring, and control.”

## Rapid deployment, easy to support

|                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                           |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Built to deploy, built to support</b><br>A powerful platform must also be practical to deploy and operate. LT AuditorMP® includes automated implementation support utilities, proven online documentation, and access to Blue Lance 2.0 technical staff for specialized configuration support. | <b>Your annual subscription includes</b> <ul style="list-style-type: none"><li>▪ Software revisions and upgrades</li><li>▪ Service packs and bug fixes</li><li>▪ Phone and email support</li><li>▪ Documentation and implementation resources</li><li>▪ Specialized technical configuration support when needed</li></ul> |
