

Press release

ASSA ABLOY (Schweiz) AG

Functional design for every requirement with innovative Planet drop-down seals for glass doors

Richterswil, October 2025 – ASSA ABLOY (Schweiz) AG will be presenting a complete upgrade of its innovative drop-down seals from the Planet KG product family for glass doors in the second half of 2025. The versatile drop-down seals in the optimised KG-A/S/F glass line impress above all with their easy assembly without drying and resting times as well as the consistently high demands on quality and functionality. Thanks to the many available colour variants, they also suit any design.

Planet drop-down seals reliably close the gap between the door and floor and are suitable for all types of doors in new buildings and existing buildings. When optimising the popular Planet KG product portfolio for single and double-leaf all-glass doors, the Swiss door solution experts focused particularly on an even smarter and more time-saving assembly. At the same time, effective sound insulation for the glass systems as well as the delicate and aesthetic visual appearance remain guaranteed in the usual high quality. Just like the versatile installation scenarios for all toughened safety glass and laminated safety glass thicknesses.

Smart assembly with no drying times

Planet KG drop-down seals have never been easier and faster to assemble with optimised seals. Instead of glueing the drop-down seal into the protection profile as before, it can be fixed mechanically via the end caps. Waiting times for drying are thus completely eliminated. The new mechanical fixing also enables easy switching from DIN L to DIN R, whereby the drop-down seal can be replaced at any time. Depending on requirements, glue, silicone or UV glue can be completely dispensed with. In addition to the tried-and-tested Planet KG-SM solution with integrated adhesive tape, Planet KG-F and KG-A drop-down seals are now also available with VHB adhesive strips, which make it very easy to attach the glass solutions to the glass.

Delicate and elegant design in all colours

The entire reworked product line is also available in the trend colour black (black C35 satin anodised). Together with all Planet KG-F, KG-An and KG-S narrow cover caps, which are also designed in black anodised finish, aluminium cutting edges are a thing of the past. Surface

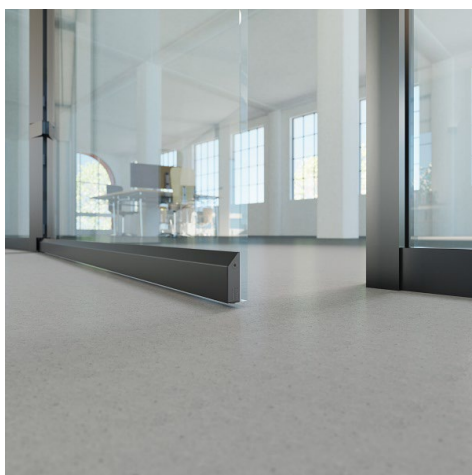

finishes in colourless anodised EV1 and satin anodised stainless steel (INOX) are also available.

The upgrade of the Planet KG product family for glass doors will be available from 1 January 2026. However, components of the predecessor products will only be available until the end of 2025 and will then be discontinued by the manufacturer.

**01_ASSAABLOY_Absenkdichtung_Planet_KG-S_schmal_Black_2025:**

With the glued Planet KG-S narrow drop-down seal, efficient sound insulation is also possible with modern all-glass doors – in a colour that matches the rest of the design and is independent of the glass thickness.
