Protection against needles	VPAM KDIW 2004 (2.5 Joules)
Armor material	PERA-PLUS™
Areal Density	3.8 kg/m ²
Thickness	4.9 mm
Warranty	7 years

SUPERB FLEXIBILITY

The COMFORT-GEN7™ is the most flexible ballistic package in the EnGarde® soft armor panel product line. The COMFORT-GEN7™ is an ideal choice for customers looking for an extremely concealable and comfortable solution.

Although all our armor products can be worn by men or women, the COMFORT-GEN7™ panel is particularly popular with our female customers. Due to its extreme flexibility, the panel is easily concealable, even on those with smaller frames.

The new PERA-PLUS™ material we use in our COMFORT-GEN7™ soft armor panel allows for a ballistic panel that is just as flexible than our previous NIJ Level II product, but at a lower weight and higher ballistic protection level.

This full-wrap design offers NIJ Level II protection and is tested in accordance with the Swedish RPS 1 standard, covering threats such as 9 x 19 DM11 A1B2, .357 Magnum JSP, and 9x19 FEB clean range ammunition. In addition, the panel has undergone rigorous testing and received official certification from Beschussamt Mellrichstadt, meeting the requirements of Schutzklasse 1 TR03/2008.

Furthermore, it has been specifically evaluated for Special Threats, including a contact shot with 9MM RUAG ACTION NP CN310 at approximately 460 m/s, according to VPAM BSW 2006.
