

# Palette CAD for craftspeople

comprehensive – thorough – fast

Our clever solutions  
for your digital future

# From initial measuring to applying the finishing touches, our software covers all your workflows

Palette CAD is the fast and secure furniture design software that suits your working methods and helps you every step of the way when preparing your projects. From rapid design through to reliable production, you follow one continuous process without having to switch between program interfaces – so you can get creative while working more quickly, with more accuracy and with more freedom.

## 1 **UNIQUE:** The intelligent wood technology board

Work with the digital Palette CAD wood technology board, which manages all production information from materials through to features such as milling or drilling series of holes.

## 2 PRACTICAL: The quick configurators

Room and carcase configurators allow you to create quick yet detailed and accurate designs for complex furnishings and make them a reality.

## 3 EFFECTIVE: The integrated waste optimisation

Palette CAD is the economic and sustainable way to work – the integrated waste optimisation automatically saves materials. This helps protect the environment and reduces your material costs.

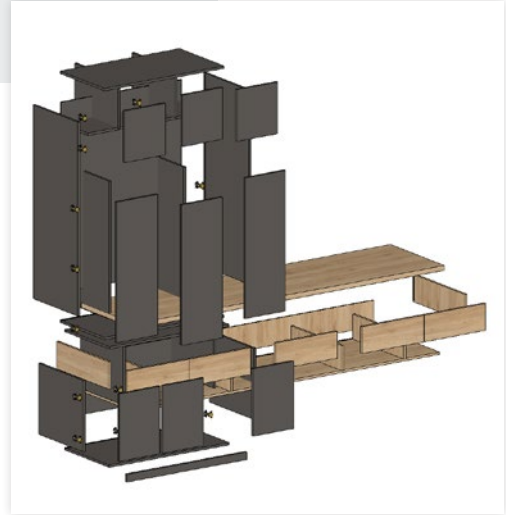

## 4 RELIABLE: Keep track of your components with Palette LABEL

Automatically create a digital cutting plan and generate barcode labels for your components to keep track of everything during assembly and avoid errors.

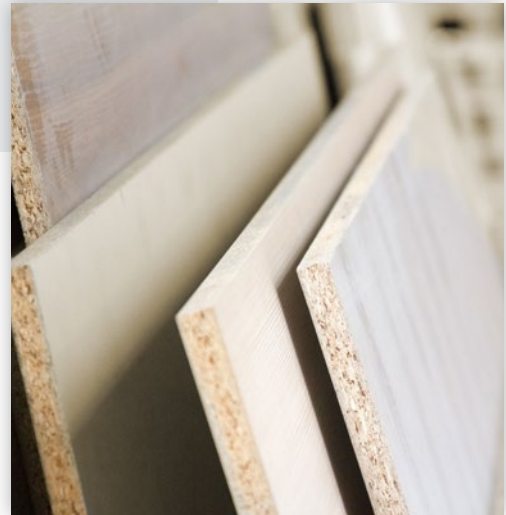

## 5 EASY TO USE: The automatic bill of materials

Create automatic bills of materials for all the boards, coverings and other materials you need straight from the project itself for costing and ordering – then one click in the online shop is all it takes to do both.

## 6 DIRECT: Integrate shops and software

Online shops from major manufacturers are just a click away, and it's easy to integrate and order their products – and Palette CAD works seamlessly with your ERP program.

## 7 ACCURATE: The integration with your machinery

Use Palette CAD to create CNC-compatible design data to avoid unnecessary extra work and potential errors when transferring.

## Successful craftspeople rely on Palette CAD

### Palette Service

#### Support for woodworking pros from wood-working pros

Our support team have comprehensive woodworking expertise and are on hand to answer questions about your furniture design software – and we can call at a time that suits you. If you have a technical problem, our experts will resolve it over the phone, by email or via remote maintenance so that you can continue working as soon as possible.

### Palette Cloud

#### Consult and work together online

Whether you're working with other craftspeople or clients, the Palette Cloud is the quick way to share your projects. It's easy to create photo-realistic, 360° panorama or augmented reality presentations and to share them with others online.

### Palette Academy

#### Go digital at your own pace

Take your capabilities to the next level – with training from the Palette Academy. Whether on site in our training centres, in online training or with E-learning, our practical courses are designed to suit all levels of expertise. Professionals from your sector will explain how to use the various features of our software and help you become a Palette CAD pro!

### Experience and development

#### Tried, trusted and constantly optimised

After more than 25 years in business, today over 16,000 users rely on Palette CAD for their digital workflows. Their trust spurs us on.
