**Crates
&
boxes**

Hangers

With love for the nature, we take a respectful approach to recycling. We grind all defective pieces in production and process the material further. In case of boxes, we are able to bring damaged boxes from customer and produce new ones from the original boxes. We also buy recycled material. Recycled material is used for example for production of hangers, shoe pads, shopping baskets, crates...

About us/Production

We own 20 machines in total - from the little ones with clamping force from 80 tons to big ones with clamping force 1200 tons. This allows us to produce products from small weights up to 3,5 kg.

Do you have a product in mind you would like to produce? We are here to produce a new mould for custom production.

We are also able to print on most of our products
