

NovaMDR™

gives SMBs and Partners enterprise-grade protection with full transparency, compliance, and peace of mind at SMB-friendly pricing.

Companies across Europe are struggling to detect and respond to modern cyber threats effectively. While many IT departments have deployed various security tools in an attempt to address this, the lack of continuous 24x7 monitoring, deep security operations expertise, a well-staffed security team, and the extremely high cost of building and maintaining an in-house SOC means many threats go unnoticed and can remain undetected in the environment for months. In fact, many high-profile data breaches occur not because the security tools failed to raise an alert — they occur because those alerts were never properly addressed or were simply overlooked.

And that's where **ForeNova's Managed Detection and Response** comes in by enabling high-grade security for everyone thanks to NovaMDR.

CORE CAPABILITIES

- **24/7 monitoring**, detection, correlation, investigation, notification, and response
- **Threat hunting** and remediation recommendations
- **AI-driven** anomaly detection and behavioral analysis
- **Real-time** dashboards and **personalized** Monthly Reports
- **Named Customer Success Managers (CSM)** who know the specifics of their customers, ensuring personalized guidance and continuity

COVERAGE & SENSORS

- **Endpoint light-weight Sensor:** Windows, Linux and macOS
- **Network Sensor (NovaSensor):** Software or hardware appliance monitoring IPv4/IPv6 traffic (SPAN port)
- **Endpoint Protection Platform (NovaGuard):** Full-blown Next Gen EPP
- **M365 Connector:** Audit, email, and configuration logs
- **3rd party Firewall Integrations:** Palo Alto, Check Point, WatchGuard, Fortinet

HOW IT WORKS

Sensors and integrations collect low-level events and raw logs which are sent to XDR backend

01

XDR backend analyses, correlates with threat intelligence and triages using rule-based and AI engines

02

SOC analysts investigate deeper, triage, respond (e.g. kill process, isolate endpoint) and notify client

03

DEPLOYMENT & INTEGRATION

- **Non-disruptive:** Lightweight agent, no rip-and-replace and simple plug-and-play for Network Sensor
- **Supports small-scale (individual) or large-scale** (bulk via Active Directory, RMM tools)
- **Easy integration** with 3rd party firewalls and Microsoft 365

DATA SECURITY & COMPLIANCE

- **All data stored in proprietary XDR backend at Frankfurt data center** - data never leaves Germany
- **Retention:** 180 days for logs, full duration for service data e.g. Incidents and Monthly Reports
- **GDPR/NIS2 compliant and ISO 27001 certified**

RESPONSE & SUPPORT

Critical incidents notified in <30 min, non-critical in <60 min

Dedicated German-speaking CSM as the single point of contact

SUBSCRIPTIONS & PRICING

Flexible 1-, 2-, or 3-year plans

New consumption-based monthly billing model launching for maximum flexibility

ABOUT FORENOVA

ForeNova is a European security platform company on a mission to enable Cybersecurity Equality through **NovaMDR™**: our fully managed detection and response service that delivers enterprise-grade cybersecurity protection but tailored for European SMBs and MSP/MSSP partners. It combines advanced XDR technology and multiple evolving AI models with 24/7 human expertise from our German SOC in Nuremberg, providing complete coverage without requiring customers to build their own security team or replace existing tools.
