

# Anjay Lite

## New LwM2M Client SDK for the most resource constrained devices

The demo showcases **Anjay Lite**, our brand-new **LwM2M Client** embedded in a compact telemetry module used in Smart Metering applications. A simple, modern and “Plug&Play” solution that communicates with AVSystem’s **Coiole IoT Device Management Platform** via NB-IoT or LTE Cat.M1 standard.

**Anjay Lite** is our new product built for ultra-constrained devices, perfect for low-power and cost-sensitive IoT applications, particularly important when you think about the large IoT deployments.

### Anjay Lite – Key Benefits

#### Lower Manufacturer and Development Costs

- ✓ **Smaller Footprint** – Reduces the overall BOM (Bill of Materials) costs
- ✓ **No OS Dependency** – Gives implementation flexibility and removes licensing costs for commercial RTOS
- ✓ **Simple, Reliable & Predictable** – Simple API reduces integration time and static memory allocation reduces debugging time
- ✓ **Free Commercial License** for up to 10.000 devices (registration required)

#### Lower Operational Costs for End Customers

- ✓ **Optimized for Battery-Powered Devices** – Low hardware requirements and battery-friendly LwM2M protocol extends device lifespan
- ✓ **Reduced Network Data Costs** – Minimal overhead in communication protocols lowers data transmission costs in cellular and LPWAN networks.
- ✓ **Guaranteed Interoperability** – Fully compliant with the LwM2M Standard, ensuring seamless integration across IoT ecosystems.

**Maximize your return on investment (ROI) with Anjay Lite!**
