Our VALU[®] system-profile

Whatever you would like to design, in nearly all cases you will find the appropriate component in the VALU modular system for the simple realization of your idea.

In the beginning is the post profile

No matter what you want to build with our system construction kit, choosing the right profile makes the work easier and provides the necessary stability for your project.

The high-quality aluminum material offers advantages due to its lightness and its high strength and extreme durability.

We offer different post and connection profiles for every requirement from fencing and privacy screens to complicated special constructions.

VALU - The brand with the ingenious groove

The flexible brand in fencing

*Individuality meets stability, flexibility and top quality.
Thanks to the static calculation of our system profiles we offer you
highest safety for privacy, garden fences, gates and balconies*

Set in whatever you like

The possibilities are enormous, with our system profiles we offer room for your creativity. Build your own individual project project individually or have it implemented by a specialist.

In addition to the post profiles, we have a large selection of aluminum filling profiles, which are available in a wide range of shapes and colors for your ideas.

You are also welcome to use other materials such as glass panels or gabions with our profiles. You will find the matching accessories in our program.

The new VALU wood decors with textured surface

Models

With our premium profiles you can design your privacy screen according to your wishes. In addition to our popular 140x20 mm Primus model, even the exclusive Blockhouse and Conkav/Convex filler profiles are available.

Closed privacy

Those who like to keep to themselves, will prefer to install a high privacy fence, to be optimally protected from curious eyes. Various models are available for this purpose. Whether closed construction or lamella fence, for every taste VALU offers something suitable.

Often, partial solutions are chosen, where only outdoor seating areas, terraces or individual garden areas should be protected from outside disturbances.

Open variants / front garden

If you want complete or partial opacity, VALU is also the right choice for you. Different model variants allow a lighter look for the whole area, or simply the front garden use.

Rhombus fences

Rhombus fences provide a certain transparency in one direction, but in the other direction results in increased opacity.

Due to the attractive design, the VALU rhombus fences are also very popular in the front garden.

Construction with distance

If you like it a little more open look, you will immediately feel at home with the somewhat lighter fence solutions. It is also suitable without restrictions for low build fence versions in the front garden.

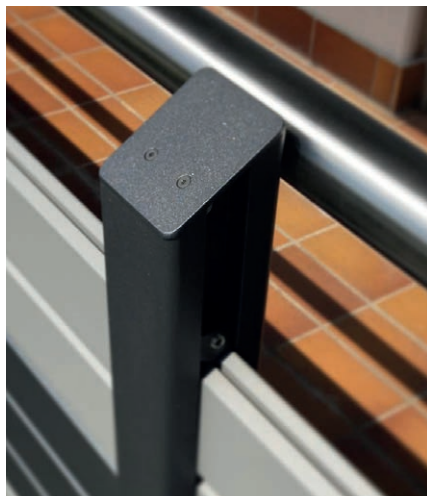

Balconies/Constructions

That with the VALU system construction kit more is possible than the fence construction, is no secret - carports, garbage can linings, bus shelters, etc. many things have already been implemented by craftsmen. Balconies are part of the product range.

VALU balcony systems

Besides our fence systems we offer you with the elements of our modular system the possibility to design your balcony in order to create a harmonious overall impression „Around the house“.

Of course our system components meet all standards for the safety of balcony systems.

Gates and doors/combinations

In addition to the desired fencing for your property, it is of course just as important to to plan appropriate access solutions. All our doors undergo an individual test assembly so that every millimeter of your door system fits.

VALU gate systems

To your premium aluminum fence belongs also a corresponding door?
You will find it in our program.

Our access solutions for VALU fence systems are all available
in different widths.

Special solutions/combinations

Whether glass, wood, gabions, design sheets, etc. - you can combine
with almost any material up to 21 mm thickness.
Ask us about the required fastening accessories.
