

## SOLUTIONS THAT MATTER: INNOVATIVE SOLUTIONS THAT MAKE THE DIFFERENCE

### DECEUNINCK AT FENSTERBAU FRONTALE 2026

**Bogen, December 2025 – Deceuninck will exhibit its latest innovations at Fensterbau Frontale in Nuremberg from 24 to 27 March 2026. At its two-storey exhibition stand, Deceuninck invites window and door manufacturers, dealers and planners to discover its wide range of solutions for all market needs under the motto “Solutions that matter. Smarter, lighter, more sustainable”.**

Carsten Otte, Managing Director Deceuninck Germany, says: “Our motto for our trade fair appearance is “Solutions that matter”. It reflects our aspiration to take the inspiration and ideas we get from dialogue with our customers and turn them into design and technology concepts. We listen to their experiences, observe market trends and analyse specific needs.” Accordingly, the company’s focus at the trade fair is on solution-orientated innovations that make the work of window manufacturers and installers simpler, easier and more sustainable in a variety of ways and set them apart from the competition.

This guiding principle is evident in the newly developed modular window installation method ‘WinLinck’: Specially developed for modular construction, fitters are able to effortlessly click windows into a modular prefabricated frame with a “click and fit” principle in a quick, precise and efficient way. With WinLinck, Deceuninck is taking a further step towards a more sustainable and efficient construction method. Visitors to the trade fair stand will also be able to see this for themselves with demo installations.

Deceuninck will also be presenting its aluminium range of windows, front doors, sliding doors and interior doors for international markets: The Decalu profile series offers extremely slim profiles, excellent thermal insulation and various design options. Decalu is perfectly coordinated with Elegant Abstract so that both profile systems can be seamlessly integrated into one building project.

With the successful Elegant profile system based on the iCOR platform, Deceuninck offers a broad portfolio for all market and construction requirements. ThermoFibra glass fibre technology has now established itself as an innovative solution for steel-free windows and doors. Deceuninck will be showcasing its latest development at the trade fair: The new Elegant ThermoFibra front door sash profile, which not only offers a significant reduction in weight and increased thermal insulation, but also ensures fast, simple and complexity-reducing production. ThermoFibra profiles are fully recyclable and contribute to a significant reduction in CO<sub>2</sub> emissions. As a result, this solution is particularly sustainable and emphasises the company’s long-standing commitment to a closed-loop circular economy and the continuous reduction of climate-relevant emissions.

Deceuninck will be in Hall 6 on Stand 103, spread over 550 m<sup>2</sup>. The two-storey exhibition stand invites visitors to exchange ideas and find out more about the company’s solutions that really make a difference.
