Developement

Why did we develop the TAMI dogbox?

We share our homes with cats and dogs. It was especially irritating to our wives to have to heave heavy metal dogboxes in and out of the car. Furthermore,

the boxes created major clutter when they were not in use. We are a German design team who have been working mainly surf boards and kayaks—and other objects for daily use. They all are made from Dropstitch Material. One day while my wife was lifting the metal dogbox, a light went on in her head: Why not develop a dogbox from strong, lightweight Dropstitch Material?

Dropstitch technology is still relatively unknown, even though the German Army has used it for decades for motorboats and speedboats. And now, hundreds of thousands of enthusiastic sportsmen and -women use inflatable surf boards. And well over one hundred thousand cows lie comfortably on mats made from this supple but robust Dropstitch Material.

What is special about this material?

Thousands of fibers stabilize the walls of the TAMI dog box, while air pressure gives it a flexibility and springiness that we call its airbag function. If you hit the brakes hard, or swerve in a curve, or even collide with something, your dog hits the TAMI dog box soft, flexible walls and can't get hurt.

Dropstitch Material can rightly be labeled "ultralight". Whereas conventional dogboxes, made from metal, weigh 20 to 30 kilos (44 to 65 pounds), the medium-size TAMI dogbox tips the scales at about 13 pounds. It can be folded up into a neat package, is easy to carry, and - best of all - simple to store. Storage problems become a thing of the past.

You can leave the folded box in the trunk of your car it's only about 8 inches thick. The flexible shell of the TAMI dogbox won't damage the interior of your car. Of course, the dogbox has buckles so that it can be securely anchored to the car when in use.

Copyright © ProSieben / Walter Wehner

The whole dogbox is water-repellent inside and outside, completely washable-and this very hygienic because it contains no textile, metal or wood. Inflating the medium-size dogbox with a hand pump takes about 20 seconds. Then you open the TAMI dogbox with a zipper that can be „intelligently“ blocked, so that your dog cannot open it and get out.

Ensuring further security: an emergency escape device. Should the trunk door become jammed in an accident, the dog can be freed from inside the car. A large net around the TAMI dogbox provides good ventilation.

Ernstfried Prade
Industrial designer

Daniel Weinberger
Chartered engineer (FH)

We think that with this new dogbox construction we have created a welcome alternative for our fourlegged friends and their owners.

The advantages at a glance

- Tough, heavy-duty zippers
- Large front entrance can be folded upwards
- Tear-resistant mesh fabric ensures good ventilation
- The fast drying TAMI Dogbox can be washed completely with water
- An additional tarpaulin protects the car from dirt and scratches when the dog gets in and out. It is attached to the rings on the bottom of the box
- Safety exit can be opened from the top of the driver's compartment
- Dimensionally stable - if the air escapes from the box, the TAMI Dogbox will still stand for the dog's safety
- Zipper lock - the dog cannot open the box from the inside
- A side luggage net holds bowl and drinking bottle
- Metal boxes often damage the interior of the vehicle. This cannot happen with the inflatable TAMI Dogbox. It is completely soft inside and out

Included

- 1x Footpump
- 1x Repair set
- 2x Short straps with hooks
- 2x Long straps with hooks
- 1x Protective pad for your car

car friendly

Contaminant-free

ultra tough

Inflated in seconds

A great advantage is that it can be folded in seconds into a small package that can be carried easily and stored anywhere. You can also leave it folded in the trunk so that 90% of the trunk can be used for other purposes.

All TAMI Dogboxes are also ideal for travelling.

Attention: The box is not approved for the transport of a dog in an airplane.

Crash test passed with excellence!

In a fraction of a second the dog's body flies with the multiple of its weight against the soft wall of the TAMI box

The TAMI Box absorbs the massive impact and wraps itself around the dog's body like an "airbag"

Then the TAMI Box springs back into its original position. The test was performed several times!

Every dog owner in Germany is legally obliged to stow and secure his dog in the vehicle so that it does not fly through the vehicle in the event of an emergency stop or sudden evasive movement. How this happens is left to each dog owner. The majority of the usual transport boxes on the market reliably secure the dog so that it does not become a dangerous projectile in the event of an accident.

The possible risk of injury to the dog is rarely mentioned! Our approach with the inflatable TAMI dog box was to protect not only the people in the car, but also the dog.

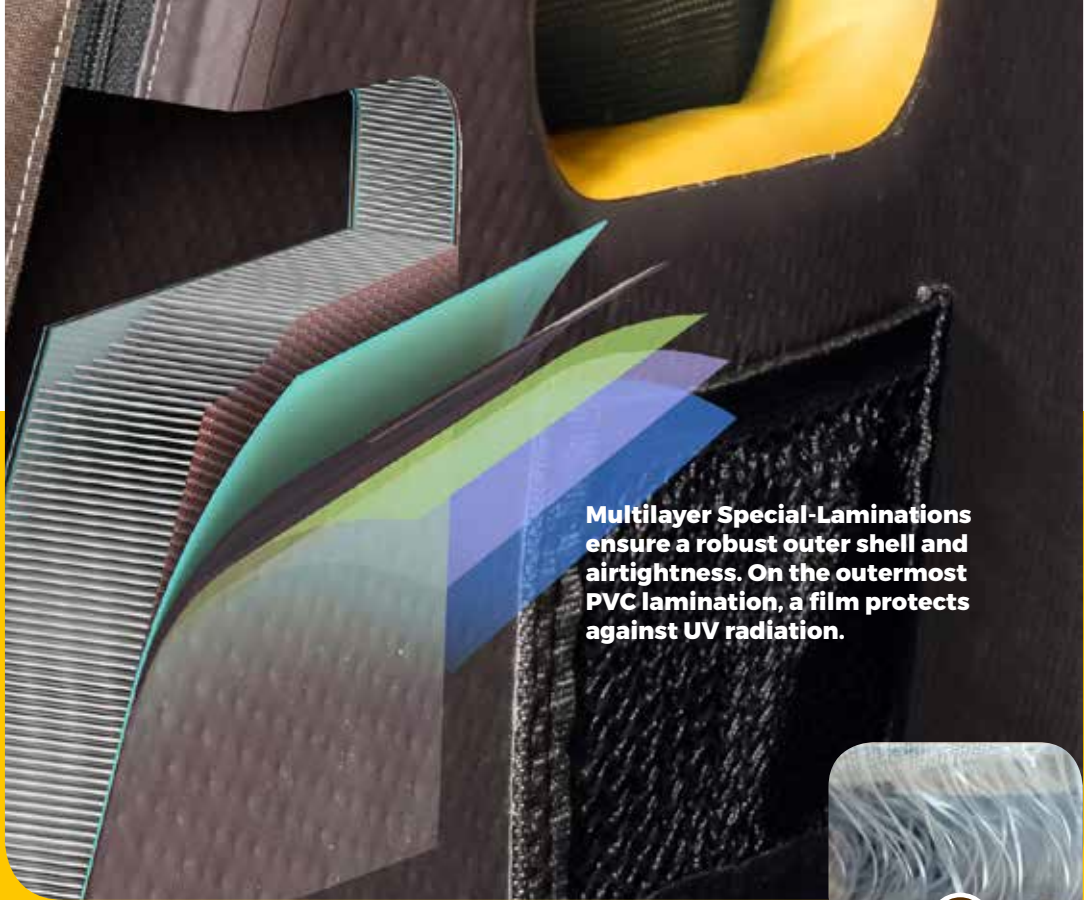

In 2019 the TAMI dog box was at „Das Ding des Jahres“ and was called on Facebook (09.2019) over 3.3 million times!

Of these 3.3 million very interested people, we received many thousands of e-mails. Partly enthusiastic about this new dog box, partly very critical, because many dog owners did not believe that in the event of an accident the dog will be protected, you assume that the box simply bursts and therefore offers no protection.

At the DTC – Dynamic Test Center in Switzerland (<https://www.dtc-ag.ch/>) we had a comprehensive crash test carried out.

Here we simulated a typical body, a TAMI trunk box behind the rear seat and a TAMI backseat box on a three-part rear seat. Each dummy had a weight of about 20 kg or 23 kg and a speed of 50 km/h. The dummies were used for the rear seat.

Result: The TAMI dog box passed the crash test with flying colours! Nice to see is in the video with frontal camera the body of the dog dummy. At the moment of the impact it hits the air-filled wall of the dog box and is completely enclosed similar to an airbag.

Multilayer Special-Laminations ensure a robust outer shell and airtightness. On the outermost PVC lamination, a film protects against UV radiation.

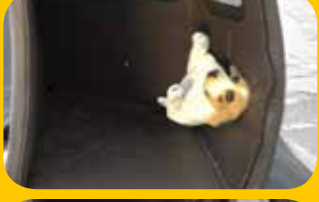

Safety Through Dropstitch Fibers airbag effect

The advantages of Dropstitch-Construction for your dog

Thousands of filaments stabilize the walls of the TAMI dogbox, and air pressure

makes it both flexible and springy—protecting your dog if you break hard or turn sharply, or, in the worst-case scenario, have a collision. If the dog hits the soft, flexible wall, the inner

wall yields and the filaments lose their tension (1). Then, the inner wall springs back and the filaments assume their previous stabilizing form (2).

TAMI SEATBOX

outer: W 17.7" x D 17.7" x H 17.7"
inner: W 13.7" x D 13.7" x H 15.7"
weight: 7 lbs

The exclusive little SEATBOX has all of the security features of the larger TAMI dogboxes and is suitable for the passenger seat as well as for the backseat. It is designed especially to fit into the angle of the seat and the seatback in most modern vehicles.

The carrier fits snugly and is secured with the seatbelt.

The TAMI SEATBOX weighs just 7 lbs and is very easy to carry. Four rings on the carrier's floor secure safely to all types of vehicles.

A touch of the finger opens the side vent.

Window recesses serve as carrying handles.

Stow a bottle, a leash, or a bowl in the gear net.

The exterior of the dogbox is completely pliant and cannot damage the interior of your car.

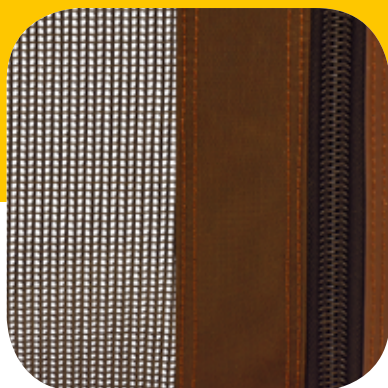

Strong eyelet rings on the bottom of the box are for securing it in the trunk.

If the air should seep out of the box, the TAMI dogbox retains its shape.

A grip at the bottom is for carrying the folded-up dogbox.

Large tear-proof net panels ensure good ventilation.

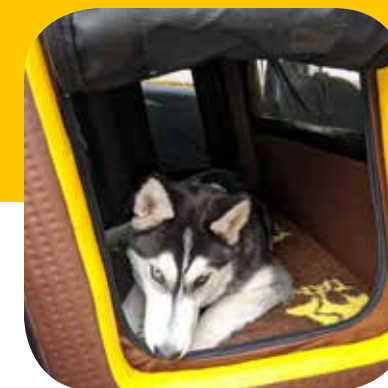

The zippers can be blocked from the outside, so that the dog can't worry them open from the inside.

The entrance door is opened and closed with tough, long-life zippers.

Made of hygienic material that is water-resistant in – and outside. The box can be completely cleaned with water.

An additional soft floor cushion can be ordered as an accessory.

TAMI Backseat

The main argument for the TAMI Backseat Box is that it fits in practically any four-door car. The TAMI Backseat Box is inflated in the car and forms itself directly on the backseat. Choose between the TAMI Backseat Box M or L depending on the size of your dog. You can use it of course in the trunk of your car too if the trunk is large enough.

Backseat Box in a rhombois Shape

An inflatable air tube can be moved forward and backwards and can be filled with more or less air to adjust the bottom angle.

Accessories

Inflatable partition wall (optional)

A partition wall available as an accessory makes it easy to transport two dogs. The partition wall is delivered with a Velcro fastener set, and can continuously divide the TAMI Dogbox into two equal, or different sized areas, reliably.

TAMI dog blankets (optional)

The original TAMI dog blankets offer a non-slip, pleasant insulating, cold-insulating and fluffy surface for your pet. Due to the very pleasant surface, the TAMI dog blanket is an ideal / warm dog lounge and sleeping place with an attractive sporadic TAMI logo design.

TAMI dog blankets are anti-allergenic, odourless and pollutant-free, and can be washed in the washing machine up to 40° without any problems. In order to keep the washing machine clean, we recommend vacuuming the blanket briefly before washing to keep any dog hairs away from the washing machine. TAMI dog mats are highly absorbent, absorb liquids and are water-proof.

Whether at home on the floor or on the balcony, in the car in the trunk, or as original accessories in a TAMI Inflatable dog box. The TAMI dog blanket does its job everywhere!

Water-resistant UV-resistant Inflatable in seconds Foldable/space-saving

driving safety

Enthusiastic Tami-Box owners told us that their driving safety has increased considerably. The reason for this is the flexible TAMI DOG BOX with a kind of „airbag function“. With this knowledge, you can concentrate fully on the road traffic, while in the past you wanted to constantly show consideration for your dog, so that the dog would not bang into the hard side walls when cornering or braking hard.
