

BHA Expandable Baton 21" Steel Autolock

Technical Data

- Product size: 21 inches
- Stick length: 23±1cm
- Weight: 440g-550g
- Unfolded length: 51±1cm
- Body material: 4142 alloy steel
- Handle material: 4142 alloy steel+TPE rubber
- Locking structure: Autolock structure
- Outer diameter of Rubber handle: 28±1mm
- Color: Black

Product features

- The rubber texture handle is effective in preventing slipping.
- The tail button design allows you to retract the stick with one click.
- The ceramic ball glass breaking stick head can easily break windows.
- It can be equipped with an anti-slip ring to prevent the stick from slipping off.

Autolock Baton Profile

The BHA Autolock baton is a professional police equipment designed for law enforcement officers and security personnel, aiming to provide effective means of defense and control, safeguard public safety and maintain social order.

It is made of advanced design concepts and high-quality materials, with excellent performance and reliability.

Autolock baton is mainly composed of a non-slip handle, a large tube, a middle tube, a front tube, a drum-disc assembly, an unlocking system, etc., with a compact and reasonable structure. The design and processing of the mechanical stick draws on the production process of the transmitter. The tube body adopts a multi-ring damping airtight structure and weapon-level production precision control. During use, the advantage of the Autolock baton is that the unlocking button can be used to quickly retract and release the stick, and the stick section can be directly stretched to complete the stick action, which is easy to carry and use. At the same time, the design is reasonable, the structure is compact, the tactical effect is good, and the service life is long.
