

Pawneer[®]

Oral

A Pet is pure emotion

PAWNEER® ORAL is an oral hydrogel for veterinary use, supplied in a 10 ml syringe-tube with a soft nozzle for direct application to the affected area. It is an over-the-counter product that does not require a veterinary prescription.

Application: the gel is indicated to promote the physiological repair of the oral mucosa in domestic animals and small non-conventional mammals following acute conditions (such as dental extractions, traumatic lesions, contact with irritant substances, etc.) or chronic pathologies (such as autoimmune processes, gingival retraction, stomatitis, etc.). In addition, daily application of the gel inside the oral cavity helps maintaining the normal physiological conditions of the mouth.

Active Ingredients:

- *Collagen*

PAWNEER® ORAL contains α1 chains of recombinant type I collagen protein, which act as collagen precursors by stimulating endogenous synthesis and assembly, ensuring proper folding. Collagen functionality contributes to the physiological restoration of connective tissues and mucous membranes. These α1 chains, produced using recombinant DNA genetic engineering technology, guarantee a pure and highly safe ingredient.

- *Myrrh Leaf Extract*

Myrrh is a gum resin extracted from the Commiphora myrrha tree, belonging to the Burseraceae family. It has been known since ancient times for its balsamic fragrance and use as an ointment. The ancient Romans already used it to treat infections of the eyes and mouth due to its antiseptic and analgesic properties. The active components of the myrrh extract contained in PAWNEER® ORAL are mainly sesquiterpenes — biologically active molecules involved in pain modulation processes.

Key Strengths

PAWNEER® ORAL is easy to apply and forms a protective film that adheres to the oral mucosa, directly dispensed from the syringe-tube, remaining in place and acting over time.

It is safe and effective in both acute and chronic conditions.

It provides a balancing and preventive action on oral physiology, ensuring comfort and well-being for sensitive pets during play and feeding.

Composition: Water, Xanthan Gum, Glycerin, Myrrh Leaf Extract, Potassium Sorbate, Citric Acid, Collagen.

Directions for Use:

Apply a 1–2 cm layer of PAWNEER® ORAL inside the oral cavity directly from the flexible syringe-tube. Avoid direct contact between the tube nozzle and the oral tissues, especially if damaged. The soft nozzle facilitates product application. One application per day is recommended; in severe cases and/or as advised by the veterinary surgeon, repeat every 12 hours.

Warnings:

PAWNEER® ORAL is not a veterinary drug product, but a product designed to support oral hygiene and protect the oral mucosa in companion animals such as dogs, cats, and small mammals. Once opened, the syringe-tube remains stable for 12 months.
