

Make sure users are not the source of cyber-incidents!

Applied research into the psychology of persuasion and engagement has led us to implement a variety of techniques applied to the implementation of an online awareness-raising strategy. We have implemented an approach based on 4 pillars and 12 psychological persuasion and engagement techniques, applied to raising cybersecurity awareness.

Get ready-to-use, sector-specific programs created by Conscio Technologies!

With Sensiwave and the content from the Conscio Technologies catalog, it's possible to define and implement just such a program. In order to identify the key themes to be used, an audit and phishing test campaigns are run in advance with employees.

AWAREPLAN:

The turnkey annual awareness program!

We schedule the campaigns, based on the standard calendar devised for each sector: you launch your program!

Sensiwave is the only solution on the market to combine powerful management for your campaigns and the option of genuinely meaningful personalization of content, creating campaigns which include your chosen modules arranged in exactly the way you want.

A few features:

- Managing Big Data statistics management,
- Creating your own content,
- Works with your organizational structure (decentralized, international).
- Many languages available.

We have a catalog of 160 modules covering different themes in multiple formats. Our content creation team is continually updating the catalog: 14-24 languages available!

PHISHING TEST

Train your users so there's less risk they'll be tricked!

Get them used to taking the necessary few seconds to think before acting.

- Several hundred scenarios, constantly updated
- Dangerous links
- Dangerous attachments

- Data entry
- Random selection of scenarios
- Alert button
- Statistics

Customization and **creation** of scenarios.
