ANALYSIS COCKPIT

THOR results. See what changed.

Thousands of systems, one review. Baseline THOR and AURORA results so analysts see what changed, group what belongs together and work every finding to a conclusion.

AT SCALE

Thousands

of assets in one investigation overview

ANALYST MODEL

Flexible

configurable analyst levels and customer workflows

INTEGRATIONS

Your tools

SYSLOG, email and webhooks; APIs and an MCP server for your tools and AI assistants

Incident response

Focus analysts on the security-relevant findings, not the full event queue.

Continuous assessment

See the relevant change in every recurring scan instead of re-reading the whole result.

Coordinated analysis

Turn related findings into cases, so investigation and response are repeatable, shareable and easier to revisit.

nextron systems

We detect hackers.

500+ customers · 30+ countries · scanning tools recommended by security agencies

ANALYSIS COCKPIT

From events to insight.

ALSO AVAILABLE AS A MANAGED SERVICE

Compromise assessments delivered by Nextron Security Experts.

Baseline your results

Focus on what changed

Review IOC matches outside the current baseline. Visualize, filter and auto-group findings for analysis, categorization and case creation.

Filter → Group → Create cases

Investigate together

Role-based access

Configure analyst levels, groups and workflows to fit your team and operational needs.

Analyst levels | Case workflows

Adapt the analyst model to your organization.

Tailor your view

Dashboards & asset overviews

Personalize Baselining and All Events dashboards. Create and share tailored event views.

AI Triage Workers

AI Triage Workers prepare the evidence behind a finding: context, related events and a suggested assessment. Analysts decide.

Report & improve

Built-in and custom reports

IOC matches, case activity and event statistics. Workflow KPIs to improve your processes.

Scheduled reporting

Define and schedule custom reports. Export raw report data to external reporting engines on a schedule.

Connect & notify

API integrations

Case management · Threat intelligence · Sandboxes
MCP server: AI assistants and agents query cases, findings and baselines.

SYSLOG | Email | Webhooks

Notify on case updates or new events in previously closed cases.

German technology for enterprises and mid-sized businesses.

Continuous assessment

Management Center → Analysis Cockpit

Regular THOR scans · Automatic event forwarding
Also ingests portable THOR scan logs and AURORA events.
Management Center is not a prerequisite.

THOR detection across IT & OT

30,000+ YARA signatures · 4,000+ Sigma rules. Handcrafted rules, anomaly detection and thousands of IOCs to detect advanced persistent threats (APTs).

See Analysis Cockpit in action.
