Identity Security Insights

Strengthen your identity security posture by uncovering & eliminating hidden paths to privilege with Identity Security Insights

Today's expansive and interconnected IT environments create a complex identity landscape, filled with ever-evolving human and machine identities, privileges, devices, and systems—each a potential entry point for attackers.

Disjointed and domain-specific identity security solutions create blind spots, hindering the ability to see the full picture of how they combine to form hidden paths to privilege that attackers can exploit. Despite best efforts, implementing effective identity security feels like a constant uphill battle!

BeyondTrust Identity Security Insights employs a data-driven, identity-centric approach, connecting your on-premises, cloud, and SaaS environments to provide a unified, continuous view of identities, accounts, privileges, entitlements, and configurations.

Sophisticated AI/ML analysis uncovers "true" privileges and hidden paths to privileges, providing rich recommendations and detections to proactively improve identity security.

"The biggest thing that I've been excited about with Identity Security Insights is that you're looking at my Okta. [BeyondTrust] is also the only one that has access to this kind of information across all my servers and my employees. I don't have a tool collecting that local information other than BeyondTrust's solutions. There's a lot that [BeyondTrust] can show me that no one else can."

—MANAGER OF INFOSEC, LEADING AMERICAN PAINT MANUFACTURER

Broad, Continuous Coverage Across All Environments
Gain a continuous view of all identities, accounts, "true" privileges, and potential paths to privileges across your identity landscape - as if through the lens of an attacker.

Hardened Identity Security Posture
Boost resilience and improve identity hygiene and security posture with proactive AI/ML powered detections and recommendations.

Effective Collaboration & Remediation
Rapidly remediate issues and share detections and recommendations across teams and tools via streamlined workflows and integrations

Feature Highlights

Centralized Dashboard

Gain a full understanding of your identities, entitlements, and threats across your entire identity estate—on-premises Active Directory, cloud platforms, SaaS applications, and IdPs—through a single lens.

Proactive detections and recommendations

Uncover identity hygiene issues and the abuse of privileges and identity infrastructure. Proactively address risks and improve security posture.

Rapidly expanding set of integrations

Leverage streamlined workflows across your IT, security, and IAM teams for rapid response and remediation. Pivot to integrated PAM controls to right-size entitlements, ensure least privilege, or block access.
