Short about Us

We are a company operating on the international automotive supplier market since 1997. Our main activity is machining of parts for the automotive industry.

We specialize in machining of aluminum and iron castings. We are able to take up most of the challenges posed by the demanding world of car producers. Many customers have already trusted our knowledge and experience. The main goal of our activity is to meet the expectations of our customers and the continuous improvement of internal processes.

We have a very extensive, modern machinery park. In our production halls located in the south of Poland in Żory, on an area of over 20 thousand m², we have built fully automated production lines with machining centers, washing facilities and leak testing equipment.
