KYBERMAN

EVIDENCE-DRIVEN CYBER AUDIT & COMPLIANCE

Not another GRC Tool
Real security evidence

Kyberman replaces manual documentation with technical evidence and verifiable audit processes across your entire digital environment.

Kyberman is a cyber audit and compliance platform for auditors, CISOs and managed security providers. It verifies security controls with technical evidence across IT, OT and IoT and maps them to NIS2, DORA, ISO/IEC 27001 and other frameworks.

3 reasons this product stands out

1 Evidence instead of paperwork

Audits rest on verifiable technical evidence, not self-assessment. Results are audit-ready for management, certification bodies and regulators.

2 Any infrastructure, full data sovereignty

Managed SaaS, private cloud, on-premises or fully air-gapped. Cloud AI or self-hosted private LLMs. Your findings stay in your perimeter.

3 Total audit freedom

Beyond built-in frameworks, define your own Audit Sets: internal baselines, sector benchmarks, supplier profiles or client checklists.

How it works

Audit Set → Evidence → AI Analysis → Reporting

AI-powered efficiency. Certified auditor oversight. Faster evidence collection, automated compliance mapping, fewer human errors.

Deployment & AI

Cloud or On-Premises

- Managed SaaS or private cloud
- Full on-premises installation
- Bare-metal, virtualized sovereign cloud deployments

Cloud or Private AI

- Private, self-hosted AI models (LLMs)
- No third-party telemetry and no use of prompts for model training
- Evidence & findings stay in-perimeter

Air-Gapped & Regulated

- 100% offline operation
- Banking, defence, energy, public
- Classified & sensitive systems

Built for security professionals

Auditors
Audit-ready evidence and structured artifacts you can confidently present to management, certification bodies and regulators.

CISOs & Security Managers
Clear insight into real security risks, to prioritise remediation based on actual business impact.

Managed Security Providers
Custom Audit Sets tailored to any internal policy, client specification or framework.

Key benefits

- Technical, evidence-based audit verification
- Audit-ready evidence and exportable protocols
- Automated cross-mapping across NIS2, DORA & ISO
- Real-time gap analysis and remediation tracking
- Risk prioritisation based on business impact
- IT, OT/SCADA & industrial IoT coverage
- Cloud, on-prem or air-gapped with sovereign AI

SECURITY STANDARDS & REGULATORY REQUIREMENTS

NIS2 · DORA · ISO/IEC 27001 · CIS v8 · SOC 2 · OWASP ASVS 5.0 · NIST CSF 2.0 · + Custom Audit Sets

Kyberman is backed by the experience of GAMO, a Slovak technology company specializing in cybersecurity services, software development and professional cloud solutions. For over 35 years, GAMO has been helping organizations strengthen and modernize their IT environments.

Kyberman is continuously evolving.
Version 2.0 delivers expanded capabilities and new use cases.
