We're back at the trade fair!

Aigner Werkzeuge will present its latest milling tools for wood and plastic processing at this year's Holz-Handwerk in Nuremberg. Among the highlights is the innovative „Konstantin® PRO“ jointing cutter system featuring a new replaceable DIA cutting edge system. This world-first innovation maintains a constant diameter even after multiple sharpening cycles, eliminating the need for machine recalibration after servicing. No readjustment for climb or conventional milling and an integrated status indicator for resharpener – a dream come true for any operator working on an edge banding machine!

To handle challenging materials such as HPL or plywood, Aigner is introducing the new DIA slot cutter program C863 at the trade fair. Users can choose between roughing, finishing, or combination geometries – and benefit from low-noise operation thanks to the Densimet tool body.

Also on display: the DIA shank cutters C442/C443 for nesting systems – versatile tools optimized for various feed rates and material thicknesses. These tools are also perfectly suited for use with routing turbines, ensuring outstanding milling quality and optimal chip extraction.

We look forward to your visit and inspiring conversations
at our booth in **Hall 9 / Stand 9-104!**
