Industrial Robust Edge AIoT Platform

Engineered for advanced edge AI computing, ASRock Industrial's Robust Edge AIoT Platform delivers exceptional processing performance, real-time responsiveness, extensive I/O connectivity, and flexible expansion options for seamless system integration. Built with a rugged, durable design, it operates reliably in harsh industrial environments, making it ideal for demanding edge AI workloads.

Versatility across a wide range of applications, the platform supports AI training, inference, and real-time data processing directly at the edge. Serving as an Industrial IoT Controller, it functions as both an edge controller and IoT gateway, ensuring stable and secure edge-to cloud connectivity. with workload consolidation optimized for efficiency, the platform powers diverse use cases, from factory automation and autonomous systems to smart cities and intelligent infrastructure.
