

IWMAC

SCADA for all your technical installations linked to refrigeration, freezing, buildings and manufacturing.

With our SCADA system, IWMAC, you get a hybrid web-based solution to stay in control of all your technical installations linked to refrigeration, freezing, buildings and manufacturing.

Future-proof your technical installations

With IWMAC, you get a comprehensive digital platform for all operations so you can view, monitor and manage your installations. Get full control of your building, or keep a check on your refrigeration and freezing systems, avoiding expensive loss of inventory.

The platform is fully independent and can integrate all technical systems across brand, supplier, and age, giving a functionality lift on older components.

Stay in control and strive for continuous improvement

Our SCADA solution ensures that the technical installations in your buildings work properly. Receive notifications of anomalies and enjoy reduced energy consumption - and an optimal indoor climate. This means lower energy costs for our customers, optimized energy use and reduced emissions.

IWMAC gives you:

Integrate all technical systems across brand, supplier, and age.

Full control over temperature, ventilation and energy consumption.

Everything is logged and has 10 years of data backup.

Remote access from anywhere for those you grant access..

Tools for service personnel, contractors, management and suppliers of technical systems.

100% web-based for the users.

Always the latest version of the software.

Unlimited number of users.

Large library of templates for almost all existing controllers.

Can include data and alerts from other technical systems, e.g. fire, burglary, sewage, doors, lighting, etc.

Open REST API.

24/7 staffed property management, operational control and alarm center.

We are the Google translate of our industry. IWMAC translates different technical languages and allows you to share, analyze and improve. All data can be made available via our REST API for integration with other systems, such as your company's SAP system.
