# WHERE IT MEETS SECURITY

## Remote Desktop Manager

The best remote connection manager in the industry

Remote Desktop Manager (RDM) is your IT toolbox for streamlining remote connection management by centralizing credentials and offering time-saving automation features.

- Stores and uses passwords securely and connects to commonly used password management solutions
- Integrates with over 200 remote connection technologies, VPNs, and more
- Locally hosts your database securely on a server or in the cloud
- Launches direct connections to privileged sessions

## Devolutions Server

Self-hosted password manager built for IT professionals

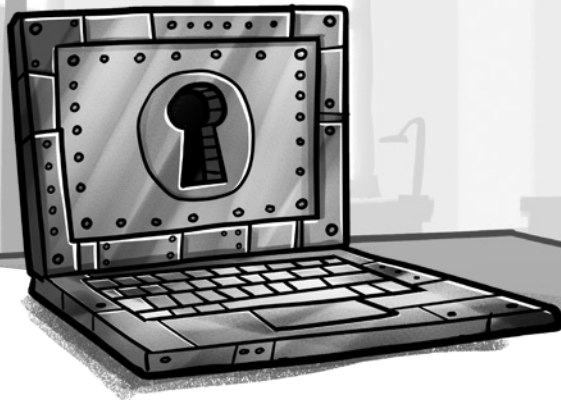

Devolutions Server (DVLS) is a full-featured, self-hosted data source for Remote Desktop Manager. It offers robust account and password management capabilities and customizable security features at affordable prices for organizations of all sizes.

- Self-hosts your data in a local infrastructure or in a private cloud for conformity and auditing purposes
- Synchronizes user creation and management as well as folder permissions with Active Directory
- Launches secure remote connections without ever revealing credentials

## Devolutions Hub

Cloud-hosted  
password  
manager built  
for IT professionals

Devolutions Hub Business is a **secure cloud-based data source for Remote Desktop Manager**. It allows administrators to store, share, and manage user access to sensitive data. End users can easily access their passwords and secured data through a user-friendly interface.

- Hub streamlines creating, storing, sharing, and managing passwords, and generates reports
- Hub raises security awareness among business users with the help of user-friendly tools like a password generator, mobile app, autofill for website logins, and more
- Hub conforms to strict standards (SOC 2 Type II, SOC 3, ISO/IEC 27001:2013), ensuring the highest level of security for its solutions and services

## Devolutions Gateway

Secure remote  
access  
management —  
No VPN required

Devolutions Gateway is a **companion tool for launching remote sessions from Remote Desktop Manager using Devolutions Server or Hub**. Devolutions Gateway can replace complex firewalls and VPNs with secure and easy-to-use just-in-time (JIT) connections to private networks.

- Ensures visibility and rigorous control over connections thanks to detailed session reports and audits
- Secures access to assets in the private network, from anywhere, through certified JIT connections. No need to install a VPN!
- Launches secure internal connections (SSH, RDP, telnet, and websites) without external access to the Internet
- Controls access with MFA for all connections
