

TerraBB: The Future of Airsoft Meets Environmental Responsibility

Hämeenlinna, Finland 19.1.2025

TerraBB, the world's first third-generation airsoft BB, has arrived. Designed to deliver top-tier performance while prioritizing environmental sustainability, TerraBB is a game-changing innovation for airsoft enthusiasts.

TerraBB stands out with three key features:

1. **Biodegradability** – The BBs break down in natural conditions, reducing microplastic pollution in soil and water.
2. **Shatter Resistance** – Thanks to an advanced elastic polymer material, TerraBB doesn't break into fragments upon impact, making it a safer option, particularly for players using mesh masks.
3. **Premium Quality** – TerraBB BBs are crafted with uncompromising precision (5.95 mm \pm 0.01 mm), ensuring superior performance for both casual players and competitors.

A Step Ahead in Sustainability

TerraBB is not just an innovation for players – it's a step toward a greener future. The biodegradable material minimizes microplastic accumulation in the environment, an important breakthrough for both the airsoft community and the planet.

“At TerraBB, we believe that top-tier performance and environmental responsibility can go hand in hand,” says Sakari Vyyryläinen, TerraBB founder. **“We're proud to offer airsoft players a product that not only protects nature but also ensures that airsoft remains a sustainable and viable activity for future generations.”**

Experience TerraBB for Yourself

Whether you're a seasoned airsoft player or a beginner, TerraBB offers the perfect balance of performance and sustainability.
