
With Ingredia Health, provide your pets effective and innovative health ingredients.

Taking care of your pets' joints so they can move freely is essential. Discover Xelflex®, our new bioactive ingredient!

Over time, factors such as age, injuries or certain pathologies can affect joints proper functioning, resulting in pain, inflammation and decreased mobility. By taking care of your **pets' joint health**, their **ability to walk, play or even climb stairs can be preserved**.

In 2025, Ingredia launched a new dried hydrolyzed casein, named **Xelflex®**. This bioactive ingredient promotes **joint comfort**. Xelflex® has been **clinically proven** to reduce **pain, inflammation and improve mobility**, and has also demonstrated **a significant decrease** in Liverpool Osteoarthritis in Dogs (**LOAD**) scores.

Help your pets regain their calm with Lactium®

Moving house, having a new job, growing family, new pet addition or going on holidays: that's life! But for our pets, losing their bearings can be very unsettling. When **stress rises** for a pet, it may not only lead to **behavior disorders** but can cause **gastro-intestinal or urinary disorders** (as in FLUTD), **skin or weight issues, cardiovascular troubles or immunity disorders**.

Lactium® is a **dried hydrolyzed casein** which contains **a bioactive decapeptide called a-casozepine**. Lactium® acts on the GABA-A receptors in the brain. Our ingredient is strong with **5 clinical studies** conducted on privately owned cats and dogs, that showed a **decrease in stress and stress-related symptoms**.

Overweight in pets is rising. Pep2Dia® helps in supporting healthy blood sugar and assisting weight loss.

60% of cats and dogs are overweight¹. Worldwide, 46% of dog owners and 48% of cat owners are worried about their pet's weight². Indeed, being overweight can induce health issues which impact their well-being and increase their mortalities. Among those issues, a higher risk of developing diabetes arises, with major complications, such as kidney failure, neuropathologies, or cataracts.

With Pep2Dia®, there's now additional help in supporting healthy blood sugar levels and assisting weight loss. **Pep2Dia®** combines the action of a carb-blocker and a GLP-1 booster. It is a whey protein hydrolysate containing **an active dipeptide AP that inhibits the activity of the enzyme alpha-glucosidase and increases the secretion of GLP-1**.
