Secure Contacts

Every business contact. One secure place. Now on the desktop, too.

Secure Contacts brings Microsoft 365, Outlook, your company directory and CRM into one app – on the smartphone and, as of now, also on Windows and macOS.

On the smartphone

iOS and Android, in a protected company container.

- **Caller ID with company context**
  Name, company and role are on the display before the conversation begins.
- **Private and business kept apart**
  Business contacts sit in a protected container, separate from the private address book.
- **Capture contacts by QR code**
  Share and scan digital business cards, at the trade fair as in the meeting.
- **Siri, CarPlay and Android Auto**
  Call and find contacts even when both hands stay on the wheel.
- **Vacation mode and anonymous calls**
  Stay in control of your availability without revealing your private number.

On the desktop NEW

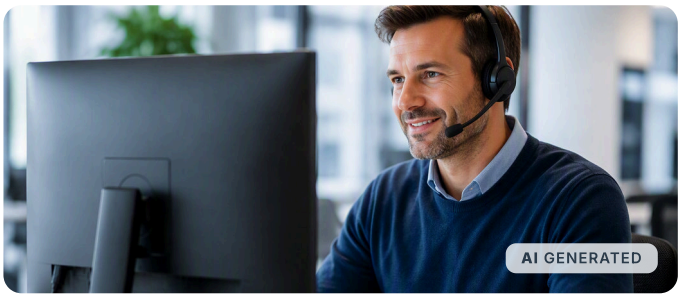

Native app for Windows and macOS, the same contacts.

- **Dashboard with widgets**
  Favorites, team availability and appointments at a single glance.
- **Advanced search across the organization**
  Filter people, teams, locations and areas of responsibility instead of scrolling.
- **Contact management on the big screen**
  Detail view, org chart and editing contacts without swiping and zooming.
- **Teams call and chat from the contact**
  Call, chat or send email directly from the contact card.
- **The same data as on mobile**
  Contacts captured on mobile are available on the desktop right away.

On both platforms

- Microsoft 365, Outlook, Azure AD and GAL in one place
- Single Sign-On through Microsoft Entra ID
- AES-256 encryption
- Runs without an additional cloud
- CRM and ERP connectors: Salesforce, HubSpot, SAP
- Central configuration via Intune and AppConfig
- Adaptable to your own corporate design
- Language support for German, English, Spanish, French and many more
