Low Dust Formula

Instant Strong
Clumping

Intro

In Today's world, cat owners demand more practical sustainable and safe cat litter solutions for their cats and the society. KITTYMAX CAT LITTER, which is made of Premium White Bentonite, offers outstanding odour control, instant strong clumping, easy scooping and low dust / tracking. A box filled with KITTYMAX CAT LITTER also needs less frequent cleaning.

How to Use **KittyMax⁺** Cat Litter

1 Select and Place the Litter Box

The litter box should be placed for maximum privacy, away from noisy appliances. Also, make sure the litter box is large enough that your cat can move around in it comfortably.

2 Pour in the KITTYMAX CAT LITTER into the Litter Box

It is generally recommended to fill the litter box with 7 cm to 8 cm of KITTYMAX CAT LITTER. You may want to use 9 to 10 cm of KITTYMAX CAT LITTER, if your cats tend to dig all the way to the bottom of the litter box.

3 Disposal of Clumps

Scoop feces and urine-clumped areas of the litter out of the litter box, using a scoop and dispose of clumps into a trash bag. Sift through the remaining litter in the pan, using the scoop, to find any additional fecal matter or urine clumps. A good rule of thumb is to scoop the litter box every day. Keep it in mind that regular scooping will keep the litter box smelling fresh and clean.

* Tie the trash bag with used litter before discarding it in the trash. Place the closed trash bag in an outside waste bin.

* Pouring the clumps into the toilet is not recommended.

4 Litter Box Maintenance

Add enough fresh KITTYMAX CAT LITTER into the litter box to replace what you scooped out. It is recommended to replace the litter completely and clean the litter box every 4 – 5 weeks, washing it thoroughly with detergent and hot water.

Product Features

- ✓ Instant and Strong Clumping
- ✓ Good Absorbent
- ✓ Premium White Colour
- ✓ Odour Control
- ✓ Made of Unye Bentonite
- ✓ Dust Free (~99% or more)
