“We’ve been using ZeroMOUSE™ for two months now. Installation was quite easy. It works perfectly for us... every entry attempt with prey has been correctly detected and blocked... about 15 times.”

„It works! We installed the device about two weeks ago... Since then... three clear attempts... to bring a mouse into the house... the solution truly deserves five stars.“

I cannot recommend this highly enough...

„After one mouse... I was in tears... I thought ZeroMOUSE™... was money thrown away... Now... it has stopped 27 mice since December... I cannot stop telling everyone... our home is a happier place... I hope it will train her long-term not to catch as much prey.“

ZERO MOUSE

No Mouse in the House

AI Prey Blocking Cat Flap Solutions

Your cat loves to hunt.
Your home pays the price. And for years,
there was no real solution.

Kids play with prey and put it in their mouth.

Dead mice at 3 a.m. Blood on the floor. A half-eaten bird after your vacation. Every outdoor cat owner knows the feeling and the mess, the stress, the sleepless nights. Prey in the house is a real hygiene risk, especially with kids around. And your cat's hunting instinct never stops – a normal cat flap doesn't either.

ZeroMOUSE™ 2.0

The retrofit that keeps prey out without replacing your flap.

Fits any standard microchip cat flap, no replacement needed. An AI camera detects prey in real time and blocks the flap instantly. Once your cat returns without prey, it unlocks automatically. Every attempt to enter with prey has been detected and blocked.

See it in action at zeromouse.com

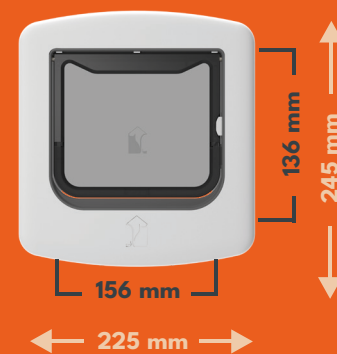

Introducing: cat flap with AI cat face identification, no chip required, prey blocking included.

Your cat's face is the key – no chip needed. The flap recognizes exactly which cat is allowed in and prevents any cat carrying prey from entering. Curfew settings configurable by schedule – e.g., allow entry at night but prevent exit. Not all RFID cat flaps offer this feature.

AI Cat Flap. Knows Your Cat. Blocks Their Prey.
