

NXLog Platform

Take control of your security, IT, OT and cloud telemetry with one powerful tool.

Enhance your organization's observability, security, and compliance by streamlining the capture of logs, metrics and traces from your entire digital ecosystem.

Trusted by Top Companies:

What is NXLog Platform?

Streamline how you collect, reduce, transform, enrich and route your machine data to **strengthen observability, security and compliance** efforts with NXLog Platform. **The ultimate telemetry pipeline solution**, NXLog Platform is a single tool powered by a suite of industry-leading features:

- Out-of-the-box storage
- Robust fleet management
- Analytics dashboards
- Agent-based and agentless collection
- A schemaless database for high-performance storage
- Support for all major SIEM, log analytics and APM solutions.

Your biggest challenges – solved with NXLog

Overwhelming, Fragmented and Inefficient Telemetry Management

When organizations struggle to centralize and route event data efficiently, it creates data silos, critical missed insights and, ultimately, operational inefficiencies. NXLog Platform quickly and effortlessly collects, enhances, centralizes and routes your event data using pre-configured input modules to improve operational efficiency.

Overloaded and Costly SIEM Systems

SIEM platforms are often flooded with redundant or irrelevant event data, driving up running costs and creating noise that obscures real security threats. With NXLog, filter duplicates and irrelevant events to minimize noise, reduce your SIEM data inflow by up to 50%, and **cut your license costs by up to 25%**. Plus, with our transparent pricing model, you can make informed decisions and take strategic action that saves your OPEX.

Lack of Visibility and Security in ICS/SCADA Environments

Industrial control systems (ICS) and SCADA networks face growing cybersecurity threats. But they often lack streamlined means of collecting and analyzing telemetry data. NXLog ensures the safety of your critical infrastructure by collecting and aggregating telemetry data from multiple Industrial Control (ICS) and SCADA systems using specialized modules and solution packs, then sending them to any SIEM or analytics destination.

Complex and Risky Compliance Processes

Meeting regulatory requirements for compliance reporting can be daunting and organizations who fail to meet them risk penalties and data breaches. NXLog streamlines compliance processes by routing relevant logs to your SIEM, protecting personal information, and retaining data for the long term in an audit-ready way.

Ineffective Security Monitoring and Threat Detection

Diverse IT environments make it hard for security teams to manage their telemetry data and detect real-time threats. With integrated log management and effortless, large-scale deployment across varied IT ecosystems, NXLog streamlines security operations, simplifies security event management, and improves detection rate – reducing your mean time to detect (MTTD) threats.

IT Operations Bottlenecks and Downtime Risks

Large-scale, heterogeneous IT environments require seamless agent management and real-time performance insights. NXLog provides detailed data on system performance and errors, enabling the faster identification and resolution of issues.

Key Features and Capabilities

Telemetry Collection

Enjoy the flexibility of a unified solution that natively collects and processes logs, metrics, and traces from the widest range of sources using our agent-based or agentless collection modes. Whether you need to gather data from your IT, OT, or cloud environments, NXLog Platform will get the job done.

Data Insights

Benefit from embedded log search, dashboards and analytics tools to improve your security and incident management processes. Visualize agents' health, performance and deployment state, and gain full visibility of your entire IT ecosystem.

Integration

Access the NXLog Platform, solutions, and services through our network of trusted technology partners and integrations. Leverage superior integration capabilities with extensions for all the major systems, network devices, enterprise applications, SIEM, APM, and more.

Fleet Management

Reduce IT overheads by effortlessly managing your entire fleet with centralized deployment, configuration, and real-time health monitoring – ensuring consistent performance across all major OS types. With granular filtering of agent metadata, NXLog Platform empowers you to quickly pinpoint issues and optimize performance across your entire environment.

Data Storage

Reduce your storage costs with optimized, highly compressed on-prem storage. Centralize, aggregate and store telemetry data from diverse sources in a high-performance, schemaless database.

Configuration Builder

Improve efficiency by swiftly creating and managing configurations – including inputs, routes, and outputs – through one, user-friendly interface. Access advanced routing capabilities that distribute data sets to suitable receivers and storages, considering use cases, and service costs.

Our Success Stories

QNB

[QNB Finansbank](#) enhanced its security operations by implementing our unified log collection pipeline. With it, the bank enabled real-time monitoring, optimized performance, and comprehensive data coverage across over 15,000 ATMs and other endpoints, ensuring robust, in-depth defense.

Biotech

This [S&P100 global biotech company](#) successfully implemented NXLog Platform to centralize log management and improve its regulatory compliance processes, real-time threat detection, and SIEM performance. In turn, it reduced its operational costs while enabling scalable and secure growth.

Ports of Auckland

[Ports of Auckland](#) improved its cybersecurity and achieved over \$100,000 in cost savings by implementing NXLog. With it, the organization reduced its SIEM-related expenses using advanced event filtering and streamlining its log collection processes.

Altice

[Altice Portugal](#) successfully addressed legacy log collection shortcomings and enhanced its security monitoring by implementing a flexible telemetry pipeline powered by NXLog. Their new telemetry pipeline supports diverse event sources, real-time analysis, and efficient log filtering, ensuring comprehensive and reliable log delivery to SOC platforms (SIEM/SOAR).

Take control of your security, IT, OT and cloud telemetry.
