

The Perfect Solution  
for Window and Door manufacturers to cooperate  
with architects

# PrefBIM

Are you looking for a quick and accurate tool to prepare quotes by your dealer network?

Look no further than PrefBim

- Cloud technology allows architects to create, modify joinery families instantly. With BIM authoring tools, architects can create a digital 3D model of the building, allowing them to see a representation of what it will look like and how it will operate.
- Bridging Architects and Windows and Doors Manufacturers with Precision and Efficiency.
- Cost-effective, easy to use with minimal training and requires no installation or maintenance.
- It provides 3D views, cross sections, details corners of configured products

Thanks to the **PrefBim** plug-in solution for Revit created by Preference, architects can very easily use the configurator to create new joinery families, modify already created families, and generally work much more efficiently in Revit.

We stay at your  
disposition!
