Azoo Bio Corporation

Established in 2014, Azoo Bio Corporation carries forward 40 years of expertise in the ornamental aquatic industry. Headquartered in Tamsui, New Taipei City, the company manages global brand operations.

Its livestock division is strategically located in the Pingtung Agricultural Biotechnology Park (PABP). This location provides a logistical edge, streamlining export quarantine and ensuring high survival rates through efficient domestic transport.

Snow Amano Shrimp

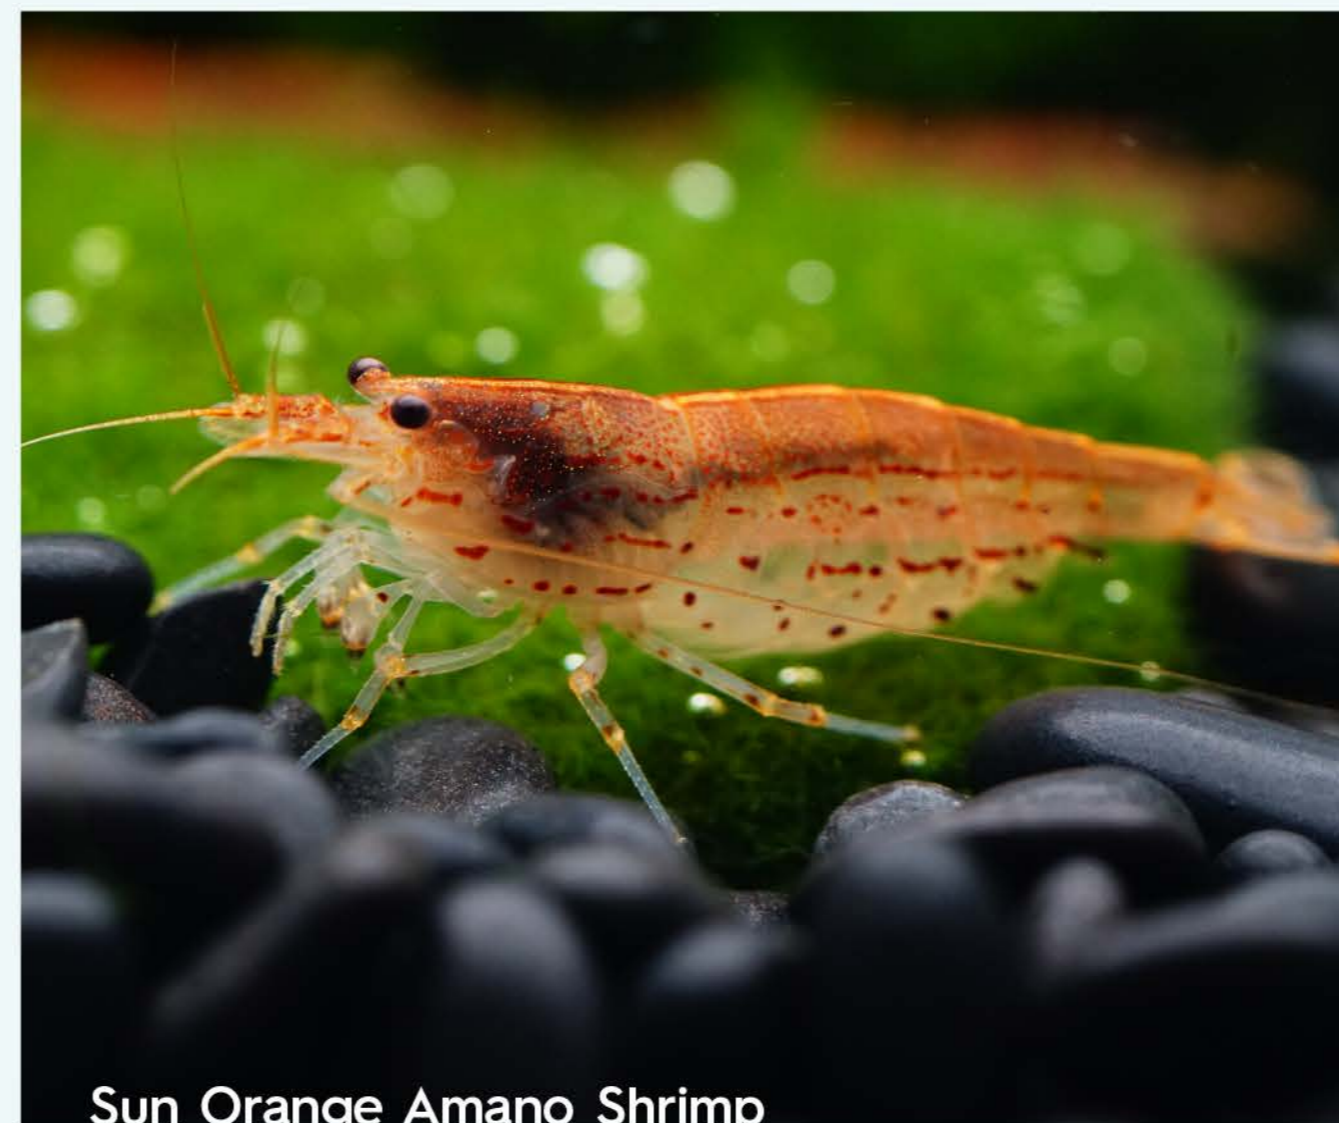

Azoo's flagship brand, Ultra Fresh, is renowned for its natural ingredients and biotech driven formulas. The brand has achieved remarkable success across major global e-commerce platforms and leading retail chains in Taiwan. This strong brand reputation provides a solid foundation for the company's livestock export business.

As a leader in supply chain integration, Azoo Bio Corporation operates facilities certified by the Fisheries Agency (MOA). Key competitive advantages include (a) High quality species included Neocaridina shrimp and Amano shrimp; (b) Close collaboration with premium breeding farms and professional studios across Taiwan; (c) A facility housing over 500 standardized tanks with strict governing procurement, quarantine, and packaging.

We are dedicated to being the primary catalyst for Taiwan's ornamental fish industry on the global stage and aim to build a world leading aquatic ecosystem that showcases Taiwan's high quality ornamental species to the world.

Sun Orange Amano Shrimp

The Colorful Amano Shrimp is Taiwan's most distinctive ornamental aquatic species, representing a major breakthrough in artificial breeding. There had developed a vibrant array of colors by overcoming complex propagation challenges. These shrimp offer a perfect synergy of functionality and aesthetic beauty. As a signature product exclusive to Azoo, they represent the pinnacle of Taiwanese innovation.

Lime Yellow Amano Shrimp

Long Life Pet Fish Co.,Ltd.

Our company is a professional aquaculture and trading enterprise with over 40 years of experience in the ornamental aquatic industry. We specialize in the breeding, production, and international supply of freshwater ornamental fish and shrimp, supported by self-owned facilities and comprehensive quality control systems to ensure compliance with global standards.

Blue Diamond Shrimp

The Blue Diamond Shrimp stands out among all Neocaridina varieties with its sapphire-like elegance and uniform, saturated deep blue coloration.

With strong expertise in breeding technology, strain management, and disease prevention, we supply diverse products to Europe, USA, and Asia. We are also highly experienced in quarantine, logistics, and international trade operations.

Committed to sustainability, we continuously enhance operational efficiency and environmental responsibility. Our well-established infrastructure and stable production capacity enable us to support medium- to long-term projects with flexibility and reliability.

Golden Back Yellow Shrimp

Featuring a bright lemon-yellow body, this variety is characterized by a bold, luminous golden stripe along its back, creating a striking and vibrant appearance.

Black Rose Shrimp

With a body color as deep and solid as obsidian, the Black Rose Shrimp exudes an avant-garde and mysterious charm.

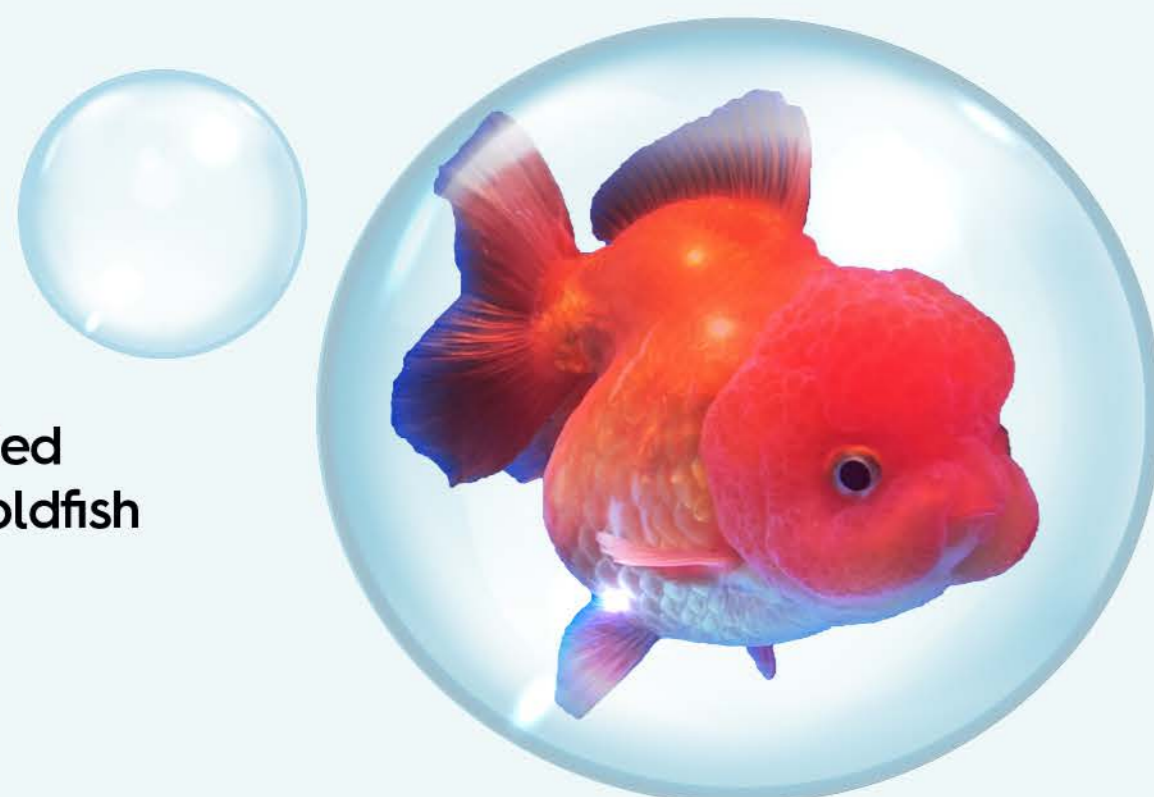

Fire Red Shrimp

Renowned for their solid, opaque crimson coloration, Fire Red Shrimp provide a stunning visual contrast against lush green aquatic plants, resembling vibrant underwater rubies.

Yes Goldfish Farm

With expertise in cultivating a wide range of goldfish varieties, Yes Goldfish Farm is a Taiwan-based breeder and an officially registered export facility. We follow standardized practices for broodstock management, batch grow-out records, health risk control, and pre-shipment checks to ensure healthy and consistent supply.

Short-bodied Oranda Goldfish

For Interzoo 2026, our key product line is Short-bodied Oranda Goldfish (dorsal fin present), featuring developed headgrowth and a compact, rounded body—one of the most market-accepted fancy goldfish types in Europe. We focus on commercial standardization (size, body shape, and coloration) with clear grading criteria, enabling importers and wholesalers to establish price tiers, merchandising plans, and efficient replenishment schedules.

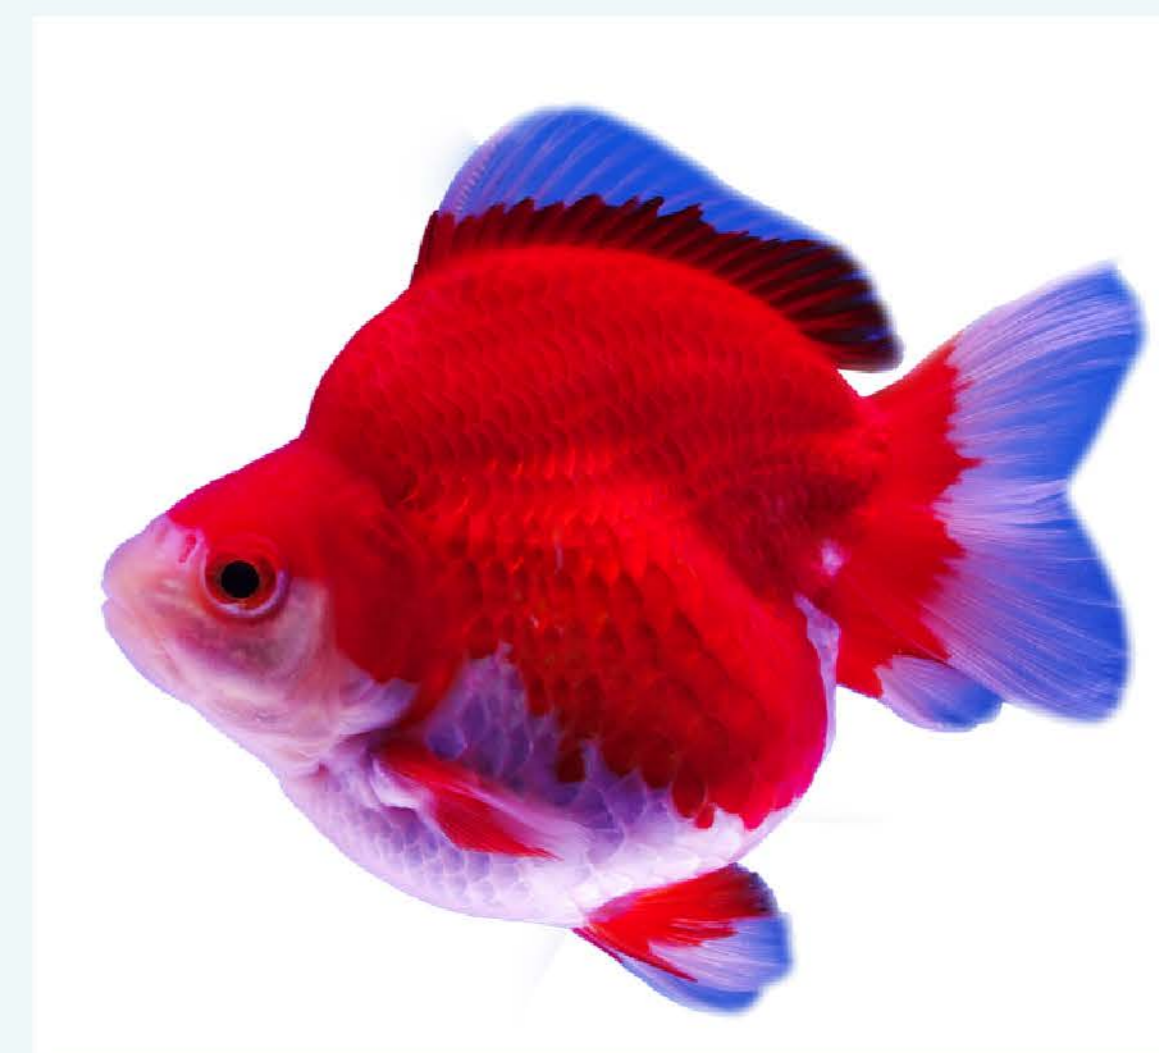

Our strengths include stable production capacity, transparent grading standards, robust health management, and after-sales support such as acclimation SOPs and replenishment planning. Through Interzoo, we aim to build long-term partnerships in Europe and strengthen the premium positioning of Taiwan-bred goldfish in the global market.

Short-bodied Oranda Goldfish

Short-bodied Oranda (with dorsal fin) are known for developed headgrowth and a compact, rounded body. Graded by headgrowth, body shape, tail form, and coloration, they are ideal for feature displays.

High-backed Short-tail Ryukin Goldfish

High-backed short-tail Ryukin feature a pronounced high back, compact tail ratio, and robust body. With clear grading by size, body shape, tail form, and coloration, they are suitable for premium retail displays.

S. T. Biotechnology Inc.

STB is a professional captive-bred designer clownfish producer in Taiwan, operating with an advanced indoor Recirculating Aquaculture System (RAS). We focus on large-scale, consistent production supported by strict broodstock management, genetic line control, biosecurity, and health monitoring.

Picasso Storm Clownfish

Bold contrast, artistic patterns, and one-of-a-kind markings make this variety a true standout in any marine aquarium.

Our production management system is certified to ISO 9001:2015, ensuring traceability and stable quality from breeding to packaging. In collaboration with Taiwan's Ministry of Agriculture Veterinary Research Institute, our fish are verified to meet EU marine fish quarantine health standards—providing confidence for international partners.

Today, STB clownfish are exported to more than 14 countries worldwide. In addition to premium fish, we offer value-added products and services, including artificial seawater mix, probiotics, and professional RAS consulting and system design to support sustainable aquaculture operations.

Black Storm Longfin Clownfish

Bold black-and-white patterns, flowing long fins, and one-of-a-kind markings make this variety a true showpiece in any marine aquarium.

Black Snowflake Clownfish

Distinctive snowflake patterns over a rich black body make this variety a striking centerpiece in any marine aquarium.

DaVinci Clownfish

Artistic patterns, vivid color contrast, and one-of-a-kind markings make this variety a standout in any marine aquarium.

Full of Frogs Amphibians Farm

Full of Frogs Amphibians Farm (F.O.F), and its affiliated trading company NJWG Pet Trading Co., Ltd., is committed to the long-term goal to use captive-breeding to replace wild-caught. Our mission is to reduce at least 1% of wild-caught amphibians entering the international pet market through sustainable captive breeding.

Suriname Horned Frog

C. cornuta, also known as Suriname horned frog and Amazonian horned frog. They have an exceptionally wide mouth, and has horn-like projections above its eyes. They are shy, but their striking appearance makes them very popular. Currently, we supply 3 varieties: red, green, and bi-color.

Our main export markets cover North America, Europe, and the Middle East, with exports to over 30 countries. We hold a 70% market share in North American, establishing the leading position in the global ornamental frog market.

F.O.F Amphibians Farm is the only officially registered ornamental aquatic animal farm in Taiwan. Our strengths include stable and large-scale production, consistent supply, and strict animal health and disease risk management protocols. Offering a more stable supply source compared to the market's reliance on wild-caught collection, F.O.F Amphibians Farm is the preferred reliable long-term partner for international distributors and wholesalers.

Coral Blaze Horned Frog

Coral Blaze horned frog is a new morph F.O.F developed over three years of selective breeding. It represents a patternless of the Strawberry, features a light coral-orange base color, beautifully contrasted with vivid flame-like red spots scattered across its body. Its unique and clean appearance makes it stand out as one of the most eye-catching morphs.

Samurai Blue Horned Frog

Samurai Blue is generated from the green horned frog, but with the light blue color instead of normal green color. When first time breeding them, it's hard to stabilize its blue color. It has to take about 4-6 weeks to turn into blue color after they come out of water. But after improvement for about 3 years, in 2022 we are able to breed nearly 90% blue frogs in one clutch.
