# Centralized, Cloud-Secure IAM for Modern Zero Trust

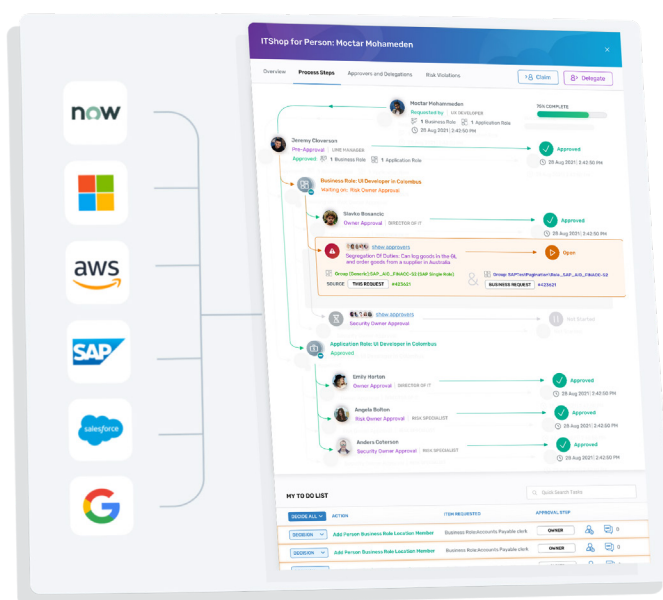

EmpowerID is the leading all-in-one IGA, PAM, and Access Management platform that helps organizations manage and secure their hybrid IT environments with a Zero Trust approach. With deep integration to Azure, EmpowerID delivers unparalleled visibility and control over access to all systems, applications, and data, enabling organizations to modernize their IT landscape with ease. EmpowerID's highly scalable and fully customizable IAM infrastructure delivers results quickly and cost-effectively, while ensuring regulatory compliance.

## Accelerate Security Efforts Across your Organization

If yours is like most organizations today, you've either already begun or are finalizing the migration of your business applications to the cloud. EmpowerID is a hybrid SaaS solution, with the option to deploy Completely on Cloud, on-Premise or Both.

It is the perfect solution for organizations to deploy and administer Identity Security services, at any stage of their cloud migration process, with zero maintenance burden rapidly and efficiently.

# The All-in-One IAM Platform

Success for the modern cloud enterprise hinges on securely connecting the right people to the right technology at the right time, enabling greater employee productivity and better user experiences.

EmpowerID delivers this promise through its Comprehensive Identity Security, that allows you to do more with what you already have.

## Azure Admin, Risk & Self-Service

Empower your Azure security with centralized administration, risk management, and self-service access controls.

## Identity Lifecycle

Automated JML processes, streamlined self-service and lifecycle events to deliver simple & fast access to all users.

## Partner/3rd Party IAM

Connect your existing IAM with EmpowerID to add new integrations, features and use-cases without any effort.

## Zero Trust Administration

Minimize risk by assuming all users, devices, & applications are potential threats require continuous authorization.

## Access Self-Service

Provide a seamless and familiar one-stop shopping experience for your access request processes and password resets.

## Cloud Access Management

Minimize Risk in Cloud by provisioning just the right amount of permissions at the right time to every single user.

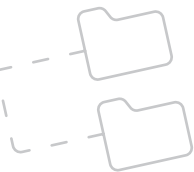

## Risk Management

Detect violations even before access request is submitted. Identify and de-provision risky, orphaned, or dormant accounts.

## Access Certification

Make user access reviews fast, simple, and accurate for your organization by automating access certifications.

## Connectors & Integrations

EmpowerID's best-of-breed connectors and Identity Orchestration offer a powerful way to maximize the value of your application and directory ecosystem. With the largest library of deep out-of-the-box connectors, EmpowerID enables seamless synchronization of data and user identities across cloud and on-prem resources.

Plus, with fine-grained permission intelligence in key systems like Azure and SAP, EmpowerID's connectors provide crucial support for Cloud Infrastructure Entitlement Management (CIEM) – making it easier than ever to monitor and control access to your critical resources.
