

# Scalefusion: Unified management. Trusted security.

As businesses embrace digital transformation, effective management of enterprise devices is crucial for driving growth. Scalefusion UEM bridges the gap between device and user identity management, offering a unified solution for provisioning and managing both corporate and BYO devices.

Scalefusion brings simplicity and sophistication to endpoint management. Seamlessly unifying security, device compliance, and zero trust access, it empowers organizations with a single platform for robust security. It streamlines IT operations, safeguards data, and elevates productivity—offering a frictionless experience for managing modern enterprises.

## Why Choose Scalefusion?

- **Centralized Device Management:** Simplify endpoint management across a wide array of devices, cutting down complexity and IT overhead
- **Comprehensive Security:** Protect your devices with integrated VPN, web filtering, and robust access controls.
- **UEM-Integrated Zero Trust Access:** Enforce secure, identity-driven access policies without compromising flexibility or performance.
- **Future-Ready:** A cloud and on-prem solution, seamlessly scalable to meet evolving business needs.

## Compliance Ready:

Complimentary Premium Support: 24\*6, response time < 5mins

## Scalefusion UEM: Endpoint Management for the Next Era

Ensure consistent policy provisioning across devices, seamless lifecycle management, and robust security for your data, apps, and endpoints from a single pane of glass.

- Automated Scripting
- Patch Management
- Remote Control & Troubleshooting
- App Catalog for macOS and Windows

## Scalefusion OneIDP – UEM-driven Zero Trust

Eliminate fragmented control and pave the way for a unified, secure approach that elevates both efficiency and security to unprecedented levels.

- Manage User Identities
- Conditional Access with Keycard
- Single Sign-On (SSO) Configuration
- Just-in-Time Access
- Zero Trust Framework

## Scalefusion Veltar: Endpoint Security with unified protection

Strengthen your security posture with unified endpoint protection and rapid threat detection for resilient operations.

- VPN tunneling
- Web content filtering
- Device Access Control
- Integrated MTD

## Key Features

### Multi-Platform Support:

Effortlessly manage multi-OS, diverse ownership endpoints from a single platform.

### Automated Device Configuration:

Leverage AI-powered scripting to streamline app deployments and device setups.

### Global Remote Support:

Troubleshoot and manage devices in real-time, no matter where they are.

### Kiosk Mode Management:

Lock devices into single or multi-app modes for seamless, purpose-driven user experiences.

### App & Device Configuration:

Quickly configure devices and applications using pre-set policies for consistency and ease.
