About Longsys

Established in 1999, Longsys is a branded semiconductor memory enterprise. Longsys is mainly engaged in the research, development, design, packaging & test, manufacture and sales of semiconductor memory products. The company has four product lines: embedded storage, solid-state drive (SSD), mobile memory, and memory module. Longsys has formed core competitiveness in memory chip design, memory controller design, firmware algorithm development, packaging & testing and manufacturing. It provides a range of storage products including consumer-grade, industrial-grade, automotive-grade and enterprise-grade storage solutions, along with software and hardware application solutions for industry storage.

Longsys owns the industry storage brand FORESEE and international high-end consumer storage brand Lexar. Longsys memory products are widely used in mainstream consumer intelligent terminals such as smartphones, wearable devices, personal computers and so on. In addition, they are also used in data centers, automotive electronics, Internet of Things (IoT), security monitoring, industrial control and personal consumer retail market.

Vision
Everything for Memory

Mission
Brand Quality Integrity
Exceeding customers' expectations

Value
Being pragmatic
Independent innovation
Joint entrepreneurship

Bottom line
Brand Quality
Compliance Value

About Lexar

Global Brand：Founded in 1996, Lexar has become a global brand covering more than 100,000 distribution channels around the world.

Complete Product Lines：Lexar has one of the most complete consumer storage product lines in the world, covering professional image storage, mobile storage, computing storage and memory, and other categories.

World-class Supply Chain：A mature supply chain system allows Lexar to control product quality from the source and offer a continuous and stable supply of goods that reduces risks for customers.

About FORESEE

The industry storage brand FORESEE was founded in 2011. Powered by technology, focused on customers, and driven by innovation, FORESEE has been engaged in the memory and storage industry for many years.

It owns four product lines: embedded storage, mobile memory, solid-state drive, and memory module, offering memory and storage solutions for commercial, industrial, automotive and enterprise grade applications.

FORESEE has made continuous efforts in independent R&D as well as comprehensive quality control. It develops new products based on industry trends and market demands to optimize performance, expand storage capacity, reduce power consumption, and improve overall quality.
