Metals

Wind

Electronics

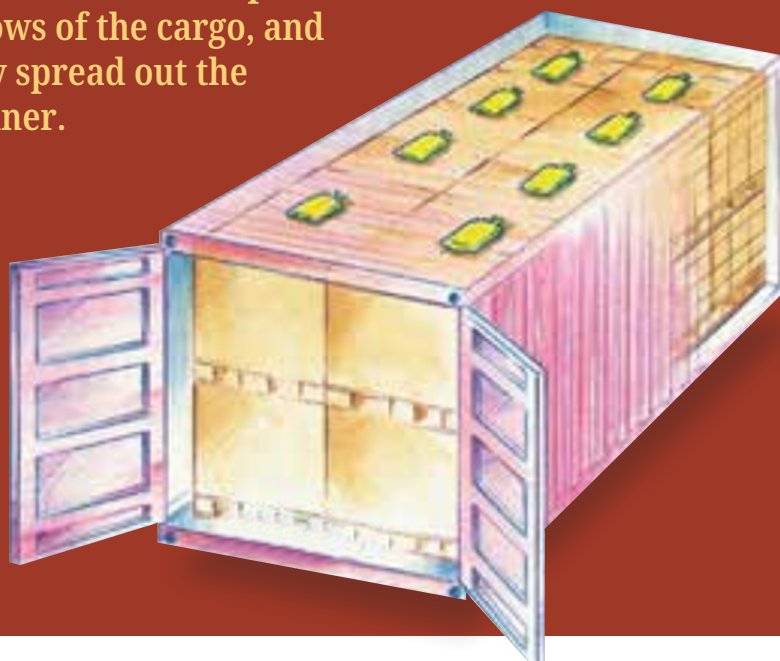

Human food

Animal feed

DRY-BAG® should be placed in 2 rows of the cargo, and evenly spread out the container.

An innovative and natural Danish product – since 1979

The base of our product are mo-clay which are only found in the northern part of Denmark and the unique clay is environmentally friendly and totally safe to use. Still having the production in Denmark, and being able to control the full value-chain, makes DRY-BAG A/S a reliable and trustworthy supplier of natural desiccants. We are a dedicated team that bring lots of know-how and our first and foremost task, is to give the right advice in order to mitigate risk of damage caused by temperature variations. Humidity leads to condensation and can cause problems like mould, corrosion, rust, labels falling off, weak cartons etc. Today our portfolio includes products for warehousing, container shipments as well as solutions for “in-packaging”.

How to apply and use DRY-BAG® with your product
