

LONGFENG Silica gel is a professional manufacturer of Silica gel cat litter that follows a programme of continuous development to adapt its individual products and ranges to match both the demands made by society in general and the wishes and requirements of individual customers.

The modern and fully-automated production facilities have a total capacity of around 110000 tons per annum and are constantly being developed and improved.

These facilities ensure optimal product quality and a flexible range of packaging solutions.

Raw materials, production processes, working partners and logistics solutions are carefully selected, showing the utmost consideration to both the environment and delivery reliability.

Our company covers an area of 66 acres and has 300 employees consists of four standardized factories. Including two production zones, one energy supply zone, and one storage and office zone.

We have a professional quality and service management team, advanced production technology, and efficient packaging and delivery processes.

Our company has unique geographical location and environmental advantages.

The company is located in an exclusive industrial park, far from the city center, relying on rivers and facing the sea. This helps us reduce production costs while meeting national environmental standards.

Our laboratories co-ordinate the interface between customer requirements and production possibilities to ensure optimal product customisation in both the development phase and, in-deed, throughout the production process. The production process and the ongoing quality assurance monitoring are carried out according to the requirements laid down by our quality management system, which has been certified to:

- GB/T 19001-2016/ISO 9001:2015 Quality Management

- GB/T 24001-2016/ISO 14001:2015 Environmental Management

- GB/T 45001-2020/ISO 45001:2018 Occupational Health and Safety Management

Furthermore, our product passed the standards of the European certified :BSCI / ICS / REACH / SGS / MSDS

Nearly 20 years , we have been producing and marketing Silica gel cat litter.

Our sales range has been continuously expanded to include complementary products, and today we can provide complete solutions for our customers in Global .

The experience, the knowledge of the market and the know how that we have built up over the years are always at the disposal of our customers .

So that, together and to our mutual advantage, we can achieve results with long-term prospects.

LONGFENG has developed complete ranges within the three following groups of cat litter products: Crystal Cat litter, Clumping litter and Pet Cub series.

The products from these three different ranges satisfy almost all customer wishes and requirements.

Crystal cat litter is mainly a product based on silica, characterized by low stacking density, light weight, and high adsorption capacity. Our range of Crystal cat litter products is distinguished by high and rapid absorption and excellent odour retention. The dust content of the products is low, so they produce a minimal deposit of dust. At the same time, the products have a remarkable capacity for

retaining the liquids they absorb.

Clumping cat litter is similarly an umbrella term for a series of primarily silica gel based products which are distinguished by the fact that they cause cat droppings to bind together in solid clumps. Our range of clumping cat litter products is distinguished by its rapid clumping properties and its low dust content which results in a minimal deposit of dust both within and outside the litter tray. This range of products is also very extensive popular.

Pet Cub series are based on pet pups, The particle size mimics fine sand in nature. Tiny particles make pets feel comfortable and natural. At the same time, this product has the same excellent adsorption capacity as the regular size. The environments used include: Pet-care, pet pups breeding, cat, birds, mice, rabbits, any pet pups.

As environmental policies are gradually being upgraded. The government has dismantled all small boilers under 35 tons and replaced traditional coal-fired boilers with natural gas. Due to the high cost and instability of natural gas prices. In 2018, our company invested \$20 million to apply for and establish an independent energy and heating company. "Dahe Energy Supply Company" This energy company is responsible for supplying energy to the entire industrial park. And it ensures that our company can continue to use low-cost and stable and efficient heating energy.

Weihai Longfeng adheres to the principle of "honest operation, quality first, and user first". Willing to develop friendly cooperative relationships with domestic and foreign customers, we look forward to working with you!
