

# The unified context layer for enterprise AI

Replace DIY complexity with the context engineering platform built for accuracy. Ship production-grade AI that is secure, scalable, and specialized.

## CUSTOMER EXPERIENCE

### Technical assistant

Improve ticket deflection rates by generating technical answers grounded in large volumes of complex support docs

## EMBEDDED AI

### AI-powered applications

Build custom AI-enabled applications that scale across millions of end users.

## KNOWLEDGE MANAGEMENT

### Policy & Procedure Q&A copilot

Improve employee productivity by making institutional knowledge accessible via natural language chat queries.

## LEGAL & COMPLIANCE

### Patent and IP research

Identify supporting evidence for patent filings and litigation by finding relevant documents from the corpus of IP and caselaw

Trusted by industry leaders

## Enrich LLMs by extracting the right context from your enterprise data

Our unified context layer enables maximum flexibility and use case specialization with agent configuration tools and dynamic workflows to search and understand all your complex documents and data.

### INTELLIGENCE LAYER

### CONTEXT LAYER

Query execution | Agentic search | Data management

### DATA SOURCES

Massive volumes of complex documents (PDF, HTML, Markdown)

## Platform benefits

70%

TCO savings

### Build your own

Deliver specialized agents that scale from pilot to production, handling millions of documents and thousands of users with flexible configuration and expert support.

- Customizable agentic workflows with dynamic and static search processes
- Adjustable generation parameters, Reranking and filtering prompts, and agent experience settings
- Operational at enterprise scale

30 days

from concept to production

### Build fast

Give developers and business users a single platform with best in class tools to ingest documents, generate outputs, and maintain performance over time.

- State-of-the-art models and components, available out of the box
- Seamless connections to enterprise knowledge bases
- Extraction of complex document types into easily consumable formats

10,000+

employee hours saved

### Build with confidence

Deploy secure AI agents that deliver verifiable answers users love and organizations trust in production

- Grounded outputs with sentence level citations that include bounding boxes of relevant content
- Evaluation, maintenance, and feedback tools for ongoing updates
- Enterprise security: RBAC, flexible deployment options, SOC2, Data encryption, etc.

## Proven results for industry leaders

### ADVANTEST

Test engineers used Contextual AI to generate code for their test plans in seconds, instead of searching references, creating standard code structures, and debugging before a test could run.

- Improve test code generation from weeks → minutes
- 30,000+ reference docs ingested
- 20,000+ queries across multiple product lines

### Qualcomm

Using Contextual AI's RAG capabilities to build a technical customer support application, grounded on millions of technical documents, that could answer complex customer queries with high accuracy

- Reduce ticket resolution support time from days → minutes
- Millions of pages ingested
- Used by thousands of employees and customers
- Tens of thousands of tickets addressed

“Contextual AI has been an invaluable partner in our AI journey. Their experience is not only accelerating our progress, but also driving meaningful impact our internal teams and significantly enhancing our customers user experience.”

Yogi Chiniga  
VP of Engineering
