5" Threaded barrel

The Type B features the AF-Speedlock® technology. The patented and proven locking system prevents the barrel from tilting during the slide cycle, lending to a flatter shooting experience with less felt recoil. This technology also lends the gun to work reliably with a wide range of suppressors. Therefore, we offer threaded barrels in 1/2x28tpi and 13.5x1lh options compatible with a wide range of suppressors.

Rubber-black
