

LogicLine, Europe's leading supplier of cargo securing systems for flatbed vehicles and pick-ups, showcases TÜV type-approved transport solutions at GaLaBau 2026

Why choose LogicLine?

LogicLine develops, designs and manufactures transport solutions for flatbed vehicles and pick-ups that enable tools, equipment and materials to be transported safely and in compliance with legal requirements. At the heart of the product range is a fully integrated system designed to maximise safety, efficiency and ease of use in everyday working life.

Transport boxes, underslung toolboxes, tarp systems and racks are perfectly matched and can be combined flexibly to create practical solutions for professionals in construction, horticulture, landscaping, utilities and service industries.

Premium materials, intelligent design features and modular expandability make LogicLine a reliable partner for light commercial vehicles throughout Europe.

TÜV type-approved: All LogicLine transport solutions are TÜV type-approved, ensuring that tools and materials are secured in accordance with legal requirements, helping users avoid fines and legal consequences.

Efficient workflows: Solutions tailored to customers' needs provide organised storage and fast access to equipment directly from the vehicle.

Built to last: LogicLine transport boxes protect valuable tools and equipment from the weather while also helping to deter theft.

Quality made in Austria: High-quality, durable materials ensure maximum stability with minimal weight.

Transport Boxes

Designed to fit flatbed vehicles of virtually every manufacturer, LogicLine transport boxes provide much more than secure cargo transport. They also improve organisation, increase efficiency and help streamline everyday work.

The RoadBox provides convenient access from both sides of the vehicle, while the ToolBox is the ideal solution when all tools need to be clearly visible and easily accessible from one side.

For customers requiring maximum flexibility, the BasicBox and CombiBox offer numerous configuration options. Storage compartments, tool holders, support feet and the quick mounting system are just some of the features that allow the boxes to be customised to individual requirements.

The LongBox is particularly well suited to horticulture and landscaping applications. Specifically developed for transporting large and long-handled tools, it provides secure storage even for brushcutters and leaf blowers.

Racks

LogicLine racks – including the FrontRack and HeckRack – allow long loads of up to six metres to be transported either horizontally or at an angle, depending on the model.

For more demanding applications, the CombiRack, PowerRack and LongRack offer maximum versatility and load-carrying capability.

Optional accessories provide both positive and frictional load restraint, while selected models offer a payload capacity of up to 350 kg. Combined with LogicLine transport boxes, the flat-bed vehicle becomes a highly versatile transport solution for a wide range of applications.

Underslung Toolbox

Anyone regularly transporting equipment inside the vehicle cab should take a closer look at the LogicLine Underslung Toolbox.

Mounted beneath the load area, it creates valuable additional storage space for tools, cargo securing equipment and personal protective equipment. A continuous sealing system protects the contents against rain and road spray, while the lid opens up to 90° to ensure comfortable and ergonomic access.

Tarp Systems

As a transport specialist, LogicLine also offers high-quality tarp systems.

As part of the integrated LogicLine system, transport boxes can be seamlessly incorporated into both the tarp system and the dropside body. The galvanised steel frame supports the tarp roof and features an inclined design that ensures effective water drainage.

Flexible side hoops provide excellent strength while absorbing minor impacts without compromising durability.

Pick-up Solutions

The LogicLine product portfolio is completed by a comprehensive range of transport solutions for pick-up vehicles.

The PickUp HardTop offers outstanding weather protection and can optionally be equipped with additional side flaps and storage boxes.

The PickUp System, meanwhile, comes as standard with side flaps and a large full-width front storage compartment. Newly developed water deflectors ensure that the interior remains almost completely dry – even when the tailgate and side flaps are open.

Its aluminium frame construction, steel side panels and powder-coated aluminium flaps not only deliver a premium appearance but also outstanding durability.

Matching PickUp Racks are also available for the safe transport of long loads.

A proud partner of the commercial vehicle industry

LogicLine is a *Mercedes-Benz VanPartner*, *Volkswagen Commercial Vehicles Premium-Partner*, *Ford Pro Convertor* and *Stellantis Certified Partner*.

Certified to ISO 9001:2015 and ISO 14001:2015, the company meets the demanding quality standards of the commercial vehicle industry and has established itself as one of Europe's leading manufacturers of commercial vehicle body systems.

Experience LogicLine

Customers can configure products individually using the online shop.

In addition, the LogicLine blog regularly provides valuable information on commercial vehicles, cargo securing, transport solutions and industry-related topics.

For personal advice, LogicLine's field sales team visits customers on site with demonstration vehicles. Expert support is also available by telephone and via live chat.

LogicLine trade fair calendar

LogicLine regularly exhibits at trade fairs throughout the German-speaking region.

The latest trade fair calendar can be found at: www.logicline.eu/services/messekalender
