# Lifecycle Management of the Digital Certificates

**Did you know that 74% of organizations experience disruptions due to expired certificates?**

This happens because digital certificates are prone to human error and expiration. In many cases, certificate management is still done manually using spreadsheets.

With **Segura® Certificate Manager**, you can centrally manage the entire lifecycle of digital certificates within your organization — from discovery, through automated scanning of websites, directories, and web servers, to the automated renewal of certificates via external or internal certificate authorities.

## Features

- **Certificate Discovery**  
 Automatically identify all certificates across the network, preventing loss and disorganization.

---

- **Continuous Monitoring**  
 Monitor certificates in real time with an alert system for expirations and failures.

---

- **Visibility Dashboard**  
 Gain a clear and strategic view of all your certificates, simplifying management and decision-making.

→ **Expiration Alerts**  
Receive early notifications about certificate expirations to prevent service disruptions.

---

→ **Complete Certificate Lifecycle Automation**  
Automatically manage the renewal and publishing of certificates, reducing errors and saving time.

---

→ **Simple and Secure Import**  
Easily import certificates into the Segura® Platform, ensuring efficient management.

---

→ **Integration with Certificate Authorities**  
Connect to leading CAs to securely request and issue certificates.

---

→ **Publishing to Web Servers and Keystores**  
Simplify SSL/TLS deployment on servers, enhancing online security.

---

→ **Native Integration with PAM Core**  
Includes native integration with Segura® PAM Core, centralizing the management of certificates and privileged access accounts in a single platform.

---

→ **Personal Certificate Management**  
Manage digital certificates used in legally valid financial transactions and document signing processes.

With Segura® Certificate Manager, your company ensures full visibility, automation, and centralized control of the digital certificate lifecycle—protecting machine identities and reducing the risk of web service downtime.

## Benefits and Differentiators

→ **Reduces risks and service disruptions**  
The CLM solution automates certificate renewal and monitoring, reducing unexpected failures and ensuring secure continuity of digital services.

---

→ **Supports Zero Trust strategy**  
Strengthens Zero Trust architecture by ensuring trusted identities for machines and applications through continuous certificate issuance and validation.

---

→ **Compliance with regulations (SOX, NIST, HIPAA)**  
Facilitates compliance with regulatory standards such as SOX, NIST, and HIPAA through strict controls, comprehensive auditability, and visibility into the certificate lifecycle.
