Strike48™

The Agentic Orchestration Platform for the SOC

Multiply the impact of your existing team, tools, and data.

ABOUT STRIKE48

An agentic layer on top of the security stack you already run

The Strike48 platform sits on top of your existing security infrastructure to deliver **unmatched control to build precise workflows** for alert triage, threat hunting, detection engineering, and beyond. Configurable human-in-the-loop controls, hybrid deterministic and cognitive workflows, and micro-agents focused on specific tasks give security teams the foundation for **verifiable agentic security**. Strike48's real-time data federation allows agents to work across all of your systems, logs, and telemetry, **without the need for migration**. **Reduce MTTR and expand coverage with Strike48 and your existing team and infrastructure.**

CUSTOMIZABLE BUILDING BLOCKS

Agentic security operations tailored to your team and environment

- **Deterministic Micro-Agent Workflows**
- **Pre-Built Agents You Can Customize**
- **Full Audit Trails for Agents and Workflows**
- **Search-in-Place and Real-Time Data Federation**
- **Human-in or on-the-Loop Approval Gates**
- **Complete Customization to Your Environment**

USE CASES

Put agents to work across the security stack

Red Team

Offensive security services and adversary simulation

- Penetration testing
- Traditional red-team operations
- Adversary emulation
- Vulnerability validation
- Security posture assessments

Blue Team

Agentic SOC and modern SIEM-driven defense

- SIEM and log analytics
- Real-time data federation
- Detection and response
- Alert triage and investigation
- Incident workflow and reporting

AI Orchestration

An AI layer across your full security stack

- Cross-platform workflow automation
- Agent orchestration
- No-code agent builder
- Unified context across systems
- Operate across data stores

One platform connecting defensive and offensive security with AI orchestration across the tools you already run.

"Strike48 doesn't just feel faster. It proves it with data. In one month, **over 75% of security cases were closed by AI alone**, saving roughly **670 hours** of analyst time."

Adam Chapman
Director of Cybersecurity | TRONOX

WHY STRIKE48

Automation that earns your team's trust

Repeatable precision

Prioritize accuracy over quick answers. Deterministic guardrails enable the precision and consistency required for security operations. Analysts act on verdicts they can trust without rechecking the work.

Full control and transparency

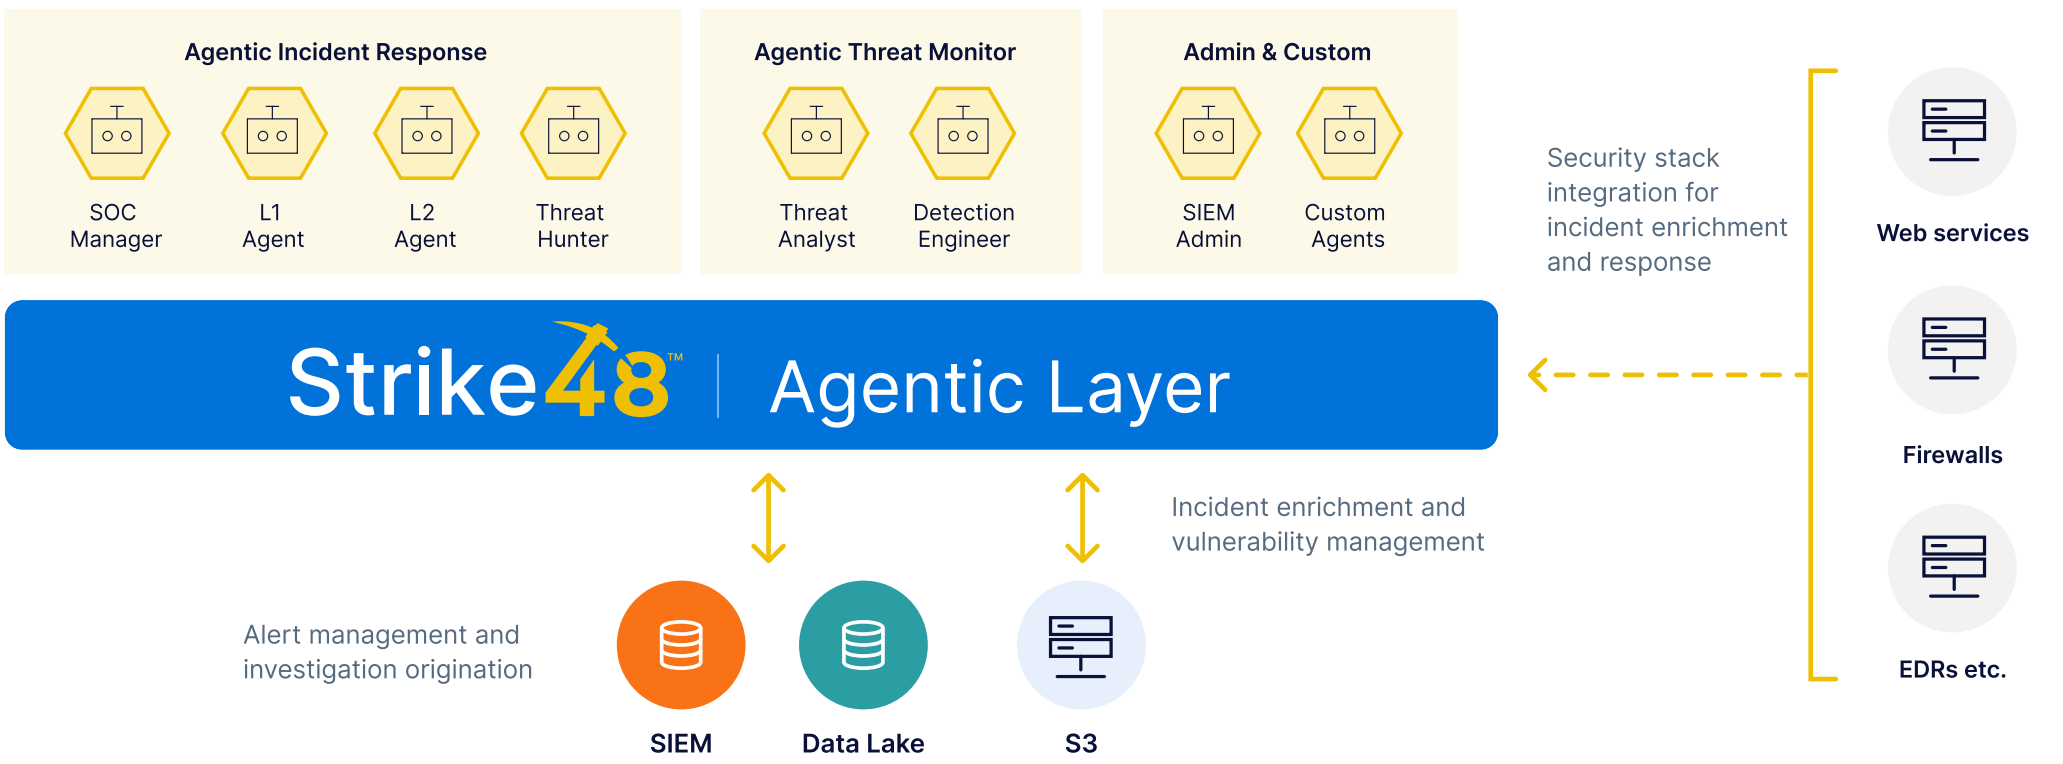

Decide the level of human involvement for every workflow. Every agent decision and action is recorded in a full audit trail. Expand automation at the pace your team trusts.

Customize to your environment

Customize agents and workflows to how your team already works. Nothing to migrate and no packaged agent logic to work around. Add value to your stack with agents that take action across existing systems and processes.

RECOMMENDED ARCHITECTURE

Single agentic layer on top of your existing data and telemetry

STRIKE48 CUSTOMER RESULTS IN A ONE WEEK PERIOD

96%	43,981	2,032	~390 hrs
of cases closed autonomously by agents	alerts processed autonomously	cases closed via automated & AI-assisted triage	of analyst time saved

ENTERPRISE-READY

Built for enterprise security requirements

300+

Tools and platforms connected

SIEMs, EDRs, observability, firewalls, identity management, cloud storage, and more

- Choose your AI model for each agent from over 100 options
- RBAC with granular permissions and full tenant isolation
- Flexible deployment modalities: web application, private cloud, on-premises, or on-prem air gapped
- Approval gates for containment, isolation, and remediation
